JOBS GO AT COMMODORE

Despite Christmas sales which far exceeded expectations and which managed to have Commodore floundering to supply enough computers to meet the demand, the production facility at Corby has been closed.

This means the loss of 250 jobs, most of which are assembly line workers, but others have gone from various white collar departments. This leaves only 170 employees at Corby, and reflecting these cuts is the move of Chris Kaday to Sales and Marketing Director, the position previously held by Paul Welch — who has now gone to Commodore Electronics on assignment, though whether he will return is open to debate.

Despite this move, and the apparent non-appearance of Commodore at the prestigious CES show during January, Commodore have still shown the Amiga at the Which Computer Show between 14-17 of January, and expectations

seemed high.

Kaday comments: "Let those of you who already own Commodore products — and those who plan to buy them this year — rest assured on one point. We are here to stay."

OPTICAL DISKS

Optimem, the division of Xerox have announced — at last — a read/write capable optical disk. This allows vast amounts of memory to be accessed amazingly quickly, incomparably faster than any similar hard or floppy disks.

To coincide with this 3M have agreed to provide the media required, and this joint venture should have the product on the market within two years.

THE UPS AND DOWNS OF AMIGA

Some really surprising happenings have been going on recently in the Amiga world. An American syndicate of computer journalists recently voted it the worst hardware product of the year (equal with the IBM PCjr).

On the other hand the Observer just gave it a prize for the most impressive? To

understand these differing views is almost impossible, although one software house I spoke to recently remarked on the difficulties of making the Amiga perform to the standard everyone expects, having seen demos such as Robot-City.

As they say, it's a mad mad mad world!

Comments...

Dear Reader,

It is ironic that the unfortunate changes on which Commodore comments in this issue of C.C.I. should take place just when so many new enthusiasts have become Commodore owners. In spite of the problems in the home computer market as a whole, the rise in Commodore numbers will in itself provide greater assurance for what is one of the most important factors in the enjoyment of owning a computer: a constant supply of new and improving software — games included, of course — and add-on hardware.

C.C.I. is very conscious of the need to encourage this supply and to tell you what you can buy that you will find most enjoyable and useful. To help you, this month, we have introduced a new and, we hope, regular feature: Money-off Vouchers.

You will see, at the back of the magazine a special page that offers C128/64, Plus/4 and C16 owners vouchers, completely free to C.C.I. readers. These mean you can buy, direct, interesting products, including games, at lower than usual prices.

We believe you will find these free vouchers a useful way of reducing the cost of items you want to buy.

We deliberately chose to begin the voucher scheme not just with C64 products but also with games for the Plus/4 and C16 machines. C.C.I. thinks it is important to encourage manufacturers to increase the comparatively limited range available to these now much more widely used computers. Our information is that more manufacturers are beginning to look in the until now neglected direction of the Plus/4 and C16, in addition, of course, toward the more generally accepted C64.

The Money-off Vouchers are just one example of the changes and advantages for you we intend to introduce into C.C.I. over the coming months. We look forward to hearing your views on the good things you will find in C.C.I. in the future. In the famous phrase, if you like what we do, tell your friends, if you don't, tell us.

Yours sincerely,
Antony H Jacobson
Publisher

GOODIES GALORE!!

We've books, T-shirts, a Marconi trackerball, an Activision Music Studio, and lots more to give to YOU. Prizes will be sent to the first people who write to CCI listing in order of preference the contents of this issue.

If you are a Plus/4 owner, let us know what software you would like to see for the Plus/4. In return we have Plus/4 books to give away.

Don't forget to include your name and address.

AMIGA CAUSES STIR AT WHICH?

Commodore appeared very pleased by the reaction of people to the Amiga at its UK debut on January 14th. The Commodore stand, dedicated almost entirely to the Amiga, showed it in its element, with the obligatory bouncing ball demos.

Also showing on the Commodore stand were software houses, parading the fruits of their development work. Notable among these was Cygnet, who showed an early version of their typesetting and basic newsletter making program.

Electronic Arts' newest package, Deluxe Paint was also there, and for the creative artist is must be the most complete package on a micro to date.

Chris Kaday, Sales and Marketing Manager for Commodore seemed pleased with the reaction of software houses to the Amiga:

"The European Developers Conference we held in December '85 was an outstanding success, and much of the software on show today was sourced in the UK", he said.

The crowds gathered around the Commodore stand at the Which? Computer show. The main attraction was the Amiga and its now famous bouncing ball demonstration.

QUIET LAUNCH FOR 128D

Although overshadowed by its newest brother, the 128D surprised quite a few people with its launch at the Which Computer Show? When I first saw the machine, nearly six months ago, it was just a 128 with a 1571 disk drive on the end. For its launch, Commodore have given it a box

not unlike the Amiga and with a neat detachable keyboard.

Another surprise was the inclusion of a 1571 drive, which has been dropped as an accessory to the 128 due to costs. The 128D comes complete with a 40/80 column mono monitor and costs £499 + VAT.

Commodore Opinion...

This month's Commodore Comment comes to you from Chris Kaday, UK Sales and Marketing Director.

The opinions published here are those of Commodore, and do not necessarily concur with the views of CCI.

"I am sure that readers of this magazine cannot fail to have noticed the recent announcement from Commodore UK to close its production facility in Corby with a loss of some 250 jobs.

The reason for this decisive action was the existence of excess manufacturing capacity in Commodore worldwide and the need to concentrate production in fewer and higher technology plants. Naturally we greatly regret the effect on the employees concerned and on the Corby community, which has suffered more than its fair share of unemployment over the last few years.

However we still employ 170 people in our sales, marketing, service and distribution functions at Corby and the attention of this slimmed down team is now focused on the aggressive marketing programmes which are aimed at retaining and growing Commodore's marketshare in the UK.

It is not anticipated that our action will affect prices, availability or support of our products. Our action has been necessary to ensure that our resources are in line with the size of the expected UK market for 1986 which, although significant, will be considerably smaller than it was during the boom times of 1983.

In order to ensure continued success in the UK the first of our marketing initiatives centred on the Which Computer? Show at the NEC from 14-17 January, where Commodore showed the Amiga to the public for the first time, as well as launching the 128D, a superb low priced small business machine. We were particularly excited about the exposure of the Amiga to the general public, as the previous behind closed doors presentations to the trade resulted in frankly ecstatic praise for the machine.

We are very positive about our future in the UK and whilst we appreciate the concern that our recent action has obviously caused, we are determined to succeed and will remain high profile presence in the UK computer market of 1986 and beyond.

Let those of you who already own Commodore products – and those who plan to buy them this year – rest assured on one point. We are here to stay."

Upgrade Your PET

Supersoft have announced several new products for Commodore's PET series.

Most PET's were sold with just 8 or 16K of RAM. Supersoft's RAM Plus boards allow an upgrade to a full 32K. Any 16K PET can have 32K of memory with the RAM Plus 16 (£55), while any large keyboard machine can be expanded from 8-32K with the RAM Plus 24 (£60).

Also new is the RAM Plus 24S (£60), a 24K expansion for the oldest 8K PET's with calculator-style keys and a built-in cassette deck.

Basic 2+4 Board (£65), allows any 40 column PET to run both Basic 2 and Basic 4. One command switches between the two, eliminating compatibility problems.

Lastly, Supersoft launch the RAMRON Board, a ROM/EPROM emulator with 8K of battery backed up RAM (£65). This is also available to special order with 16K or 32K or 32K of RAM (quotation on request).

Contact: Supersoft, Winchester House, Canning Road, Wealdstone, Harrow, Middlesex HA3 7SJ. Tel:01-861 1166.

Flow charter

Flowcharter is a machine language program which Supersoft claim "could revolutionise Basic programming for beginners and professionals".

It is a program for the 64 that will display or print a flow chart of a Basic program after it has been written. When you can't see what is going wrong with your program, Flowcharter provides you with a flow chart within seconds.

Flow charts can be displayed on the screen or printed out. Recommended printers include the Commodore 1525, 1526, MPS-801, MPS-803, and any Epson compatible dot matrix printers.

Flowcharter is available on disk (£14.95) or cassette (£12.95).

Contact: Supersoft, Winchester House, Canning Road, Wealdstone, Harrow, Middlesex HA3 7SJ. Tel:01-861 1166.

Plugs and Sockets

Plugs appear to be the thing of the moment judging by the number of press releases we've received on the subject.

Duraplug have introduced the MultiLine plug, a four-in-one 13amp enabling up to four appliances to be connected to a single socket outlet without the need for additional plugs and adaptors. Available in black or white and fused at 5amps, the MultiLine plug costs around £5.

Also from Duraplug is the Duraline range of four-way socket outlets. The two models are the non-fused 4135 (£9) and fused 4136 (£11).

Both models feature a rocker on-off switch, a neon mains-on indicator and a removable terminal cover for easy wiring. The sockets can also be fastened to walls without the need to detach the main cover.

Smoothline is a new four-way filtered connector from Conblock Electrical, designed specifically for better home computing. Providing four filtered outlets (each rated at 6amps max), the Smoothline comes complete with mains lead and plug, and is fitted with four miniature plugs for wiring to computer equipment.

Costing £18.99, the Smoothline eliminates many of the system problems caused by interference transmitted via the mains supply.

Contacts: Duraplug Electricals Ltd, Westwood Works, Margate Road, Broadstairs, Kent CT10 2QL. Tel:0843 68771

Conblock Electrical Ltd, Mochdre Industrial Estate, Newton, Powys, S Wales. Tel:0686 27100.

Computers in Education

Collegiate Microcomputer is an American journal which offers a forum for the exchange of ideas on the role of the microcomputer in all subjects and areas of college and university life.

The publishers are calling for papers for inclusion in the journal. Material appearing includes uses of hardware and software, descriptions of courses, units and topics using microcomputers, results of research using microcomputers, analysis of experiments using microcomputers,

projects, suggestions and tips, write-ups of experiences as microcomputer consultants, reviews of literature, evaluation of microcomputer use in the office and in materials preparation for teaching and research.

Subscription rates are \$28 per year and \$36 per year for non-US subscriptions.

Contact: Collegiate Microcomputer, Rose-Hulman Institute of Technology, Terre Haute, IN 47803, USA.

64/128 Modem

Miracle Technology's new 64 Multimodem gives access not only to Prestel, Micronet, Microlink and viewdata services, but also to databases, bulletin boards, electronic mail, telex and user-user communications.

Menu-driven and multi-speed, 64 Multimodem supports CCITT V21/23 and Bell 103 standards, handling baud rates of 300/300, 1200/75 and 75/1200. All software is on-board in ROM. Features include autoanswer, autodial, save and print frame, automailbox with edit and save and telesoftware downloading.

The modem, costing £98.50 (£116.15 inc VAT and UK delivery), fits the computer's cartridge port.

Contact: Miracle Technology, St Peters Street, Ipswich IP1 1XB. Tel:0473 50304

EPAD for Modem

Tandata now have an enhanced version of the Tm512 modem. The Tm512E features EPAD, the error-checking protocol developed for use on PSS (Packet Switch Services). EPAD is designed to ensure error-free data transfer to and from a terminal or computer and the PAD (Packet Assembler/Disassembler).

Retailing at £339 exc VAT, the Tm512E auto-dial, auto-answer modem operates at V21 (300/300 bps), V23 (1200/75, 75/1200bps and 1200/1200 half duplex) with Bell available for overseas use. The modem's microprocessor and operating system senses the speed and parity at which its micro/terminal talks to the modem, will select from traditional pulse or tone dial telephone line by 'listening' to the line and will automatically select the right baud rate to use when the host computer's modem answers without the modem or the micro/terminal having to be re-configured.

Contact: Tandata Marketing Ltd, Albert Road North, Malvern, Worcs WR14 2TL. Tel: 06845 68421.

Electronic Music

Electronic music has become very popular in recent years. From the electronic sounds of groups such as Kraftwerk and Jean Michel Jarre to the computer generated effects heard on Paul Hardcastle's 19, the computer plays various roles in the generation and production of music.

In the recording studio it is not unusual for a drummer to be replaced by an electronic drum machine. On stage you will undoubtedly find a microprocessor in some form.

Computer-generated music has, in the past, been criticised for sounding too 'clean'. The lack of spontaneous creativity – and the lack of mistakes. The instruments of today are capable of almost anything – some even have the facility to introduce random mistakes!

Music and the home computer is an area of computing that is fast expanding. There are numerous musical software packages around to enable you to make music with your micro, but it is the add-on musical peripherals that we are focusing on in this issue.

For beginners

If you are not a musician, but would like to learn how to get the best out of your computers musical capabilities, an ideal package to start with is Commodore's Music Maker. At under £20, Music Maker turns your 64 into a keyboard via a keyboard overlay and accompanying software. You can easily pick up the basics of music and write your own tunes.

Additionally from Commodore are the Playalong albums. Although not really a

Learning a few simple notes, or making professional sounds – the musical possibilities of your home computer are endless.

peripheral, they are so good that we will stretch the rules a little here.

Three Playalong albums are currently available: Pop, Classics and the Beatles. These albums allow someone with absolutely no musical knowledge to play along with well-known hits. You can quickly learn to play the songs yourself and can soon astound friends and relations with your new-found talent!

Sampling sounds

It is also possible now to produce effects such as those found on Paul Hardcastle's Number One hit record, 19, with your computer. These are achieved by means of a digital sampler.

Three samplers appeared on the market almost simultaneously last summer. Commodore again have the perfect product for the beginner – the Sound Sampler. The cheapest of the bunch, it turns your 64/128 into a synthesiser and a sound recording studio.

A sampler samples sounds. You can record any sound from a piece of music to a cough or slamming door and play that sound back at a faster/slower speed, backwards, repeated or looped.

Microsound market the Autographics Digital Music System, designed to give musical results similar to those produced by expensive multi-track recording studios. The software is designed to be used via your computer's Qwerty keyboard in addition to Microsound's keyboard.

The sampler most suited to professionals is the Microvox sampler from Supersoft. Including its own keyboard, it comes with a comprehensive library disk of sample sounds including the now infamous Suzy giggle. (Try keeping a straight face when listening to it.) It also has the recommendation of Feargal Sharkey, who was one of the first people to own a Microvox sampler.

Beat the drum

If you've always fancied yourself as a demon drummer, Syndromic's Digidrum will be the answer to your dreams. It is a professional digital drumcomputer designed to operate with the 64, using 'live' digital sound samples which are encoded onto the software.

Additional software is now available in the form of Sound Set 1. Over 50 new sampled sounds are included from tomtoms to Latin effect.

Enhancing Sound

While many of the available products make use of the capabilities of the 64's SID chip, others are appearing on the market which give your computer extra sounds.

Siel's Sound Buggy, for example, allows the user complete control over a new sound chip. Commodore's Sound Expander turns the computer into a generator, enabling eleven voices to be used at one time.

With the event of MIDI (musical instrument digital interface), the option of attaching a musical keyboard to your home computer arises. Any MIDI keyboard can be interface via a MIDI interface. Siel's CMK 49 is designed specifically for the 64 and, as such, fits directly to the expansion port eliminating the extra expense of an interface.

Micro Talk

Another area of computer sound is, of course, speech recognition and synthesis. Somewhat surprisingly, there are now less speech products on the market than this time last year.

Voicemaster, from Anirog, combines three functions in one package: speech

synthesis, word recognition, and composing and performing music in real time. Unfortunately, this is another product that is no longer being promoted, so if you're interested rush down to your local computer dealer while stocks last.

For details on a wide variety of sound products, refer to our checklist.

Speech Recognition & Synthesis

Product	Features	Machine	Price	Company
Sweet Talker	Synthesiser – allophone system, 3" square, 1 1/2" high, gives examples & demonstrations. Shape & colour as Commodore	64	£24.95	Cheetah
Voicemaster	Unique 3-in-one package, speech reproduction, speaks in own voice. Voice harp – just whistle or hum to produce music	64	£59.95	Anirog
Currah Speech 64	"Y" cable available, converts text to speech direct from screen, uses allo phones system, infinite vocab.	64 (compatible with C128)	£21.95	Welwyn Electronics

MUSIC ADD-ONS

Product	Features	Machine	Price	Company
Datel Sampler	Hardware in corporates full 8-bit D to A and ADC conversion. Software includes sample editing	64	£49.99	Datel
Music Maker	Starter program. Turns 64 into keyboard.	64, 128	£19.99	Music Sales
Playalong Albums	3 available : Pop, Classics, Beatles. 12 songs. Auto playback or will teach to play melody.	64, 128	£9.99	Music Sales
Sound Studio	2 programs in 1. (1) Turns computer into synthesizer. On screen controls. 60 sounds in memory. (2) sound recording studio (3 channels). Real step time.	64, 128	14.99	Music Sales
Sound Sampler	Hardware & software package with audio lead and mike. Samples and digitizes sound. Editing facilities. Pitch sampler. Drum & echo facilities.	64, 128	£69.99	Music Sales
Sound Expander	Hardware & software package. Gives 64 extra sounds. Turns computer into generator using F.M. technology. Enables 11 voices to be used at one time. Easy play features built in.	64, 128	£99.99	Music Sales

Stop playing games— Start earning money!

The computer that's been giving you such a fun time with games now gives you the chance to earn some money. Helping you with word processing, secretarial work and even running your own business.

All because of the brilliant new word processing package, **SuperScript** from MicroPro — the makers of WordStar — the world's best selling word processing packages for microcomputers.

SuperScript

writes letters, invoices, reports, tables, documents, it stores, edits and even checks spelling.

Versatile SuperScript SuperScript combines word processor, spelling checker, calculator and mail-merge facility, all in one package. So SuperScript gives you all the tools you need to produce high quality reports, tables, lists, personalised letters and prints labels quickly and efficiently.

Simple for the beginner If you are a newcomer to word processing, SuperScript puts you immediately at ease. Each command is a single word, and for each command you simply move the cursor. You don't even have to type the command.

Good with numbers SuperScript allows you to extend your editing line up to 250 columns for wide documents like financial statements, and with decimal tabs it's easy to enter properly justified tables of numbers. SuperScript's complete set of calculator functions can be used interactively or you can operate on numbers from the text of your document. Apart from the usual mathematical functions like add, subtract, multiply, divide, and percentages, you have the ability to add rows, columns or even whole tables.

Good with spelling, too The built-in spelling checker goes right through your text, checking for errors. You have the option to correct any error, ignore it, or add the word to its 30,000 word dictionary.

Editing options SuperScript gives you all the editing options of a business-style word processor, with full block manipulation for cut-and-paste; overtype or text insertion modes; search and replace with pattern matching and optional case discrimination; backward search, case shifts for single words or larger blocks of text. And much more.

Powerful for the experienced user SuperScript also gives you the ability to cut work down to a minimum by storing your own command sequences or text on single keys. This means that with a single keystroke you can reproduce commonly used phrases or multi-line addresses from a glossary, load in document formats or execute a pre-programmed sequence of operations.

Mailings with SuperScript Personalised mailings are easy with SuperScript. You can enter the data manually or use data extracted from your spreadsheet or database. Merging can be selective. A mailing labels template is included to help you complete your mailing and you can alter the template to suit your own label format.

Attention Easy Script users! If you're already an Easy Script user, then SuperScript is the obvious next step. With its enhanced features and more powerful facilities, you'll be able to do so much more. There are no compatibility problems either. You can run your Easy Script data or Easy Spell dictionary disks under SuperScript. And by returning your Easy Script disk can obtain an upgrade for just £49.95.

Audio and trigger outputs.		£65.00	Syndromic
Sound Set 1	Disk containing over 50 new samples for Syntron Digidrum. Latin and Syndrum kits plus full selection of tom-toms, sweep, pitchbend toms, cymbals, hihats, Latin effects and syndrum effects. Also in Cassette.	C16	£16.50	Syndromic
Digital Music System (Microsound)	Designed to provide the ability not only to play back the sampled sounds at various pitches, but also to create complex sounds using Dynamic Amplitude Modulation, Definable Pointer sets, Looping, Reversing, and mixing different sample sounds. Keyboard is a full size 4 octave unit that connects to the 64 via the games ports and requires no external power supply.	64	£165.22	Autographics
RMS 6H	JMS Midi Master Synchronizer allows synchronisation of conventional trigger signals and Sync Signals with MIDI synchron code. Each capable of controlling several devices.	64	£239.00	Rosetti
RMS 20C	Midi Multitrack Composer. An effective step 64 time Composer program offering six channels with Computer input one note at a time. Editing facilities include pitch, gate time, velocity, sound changes and transfer.		£49.95	Rosetti
Microvox	Package consists of sampling unit, system disk (with 'start-up' samples) and Library disk. The sampling unit has two programmable 24dB/octave filters and gives a S/N ratio of 59 dB.	64	£229.95	Supersoft
Siel CMK 49	Music Keyboard, 4 octaves, fits directly to expansion port, software allows complete control over SID chip, programming in mono and poly modes, MIDI Master Keyboard function w/split facility, 99 sounds per file possible, 40 sounds immediately available, demo songs.	64	£125.00	Syndromic
Siel Sound Buggy	Comes complete with overlay clip-on keyboard but can be controlled via the CMK 49 keyboard. Allows the user complete control over a new sound chip, auto-accompaniment melody sequencer, sounds and rhythms already programmed, MIDI facilities include Receive/Transmit plus channel and program change for four individual MIDI lines.	64	£99.00	Syndromic
MCS	Combines interface, MIDI link and comprehensive disk software	64	£200	Joreth Music
AMS	Editor, keyboard, linker synthesiser and MIDI modules	64/128	£39.95	Rainbird

Modems: the Art of Communication

Buy a modem and you'll never look back as you enter the vast world of communications. You will be able to communicate with bulletin board systems, information services, mainframe computers and other home computers.

What is a modem?

A quick bit of technical background first. Modem is a shortened version of the two words which describe its function — Modulator and DEModulator. To send data over telephone lines the binary signals used by a computer must be converted to the analogue signals understood by the telephone lines — this is the modulation end of the process.

To receive data, the audio signals of the telephone are converted into the electrical impulses of the computer — this is demodulation.

In short, a modem acts as an interpreter, converting the computer's language into one understood by the telephone.

Choosing a modem

The most important variance between different kinds of modems is that of speed: how fast can the modem send or receive a certain amount of information. Your decision will depend on how extensively you intend to use a modem.

When talking about the speed of a modem, you will come across the term baud rate. A very basic explanation of baud is that the baud rate is the number of

One of the fastest-growing uses of home computers is the field of telecommunications. This means using your computer to send and receive data over telephone lines. To do this you need a modem.

characters per second the modem can send, divided by 10. For example a 300 baud modem, the slowest used, can send about 30 characters per second.

Modems at each end of a system must send and receive data at the same speed in order to communicate. The three most common standards are: the 300/300 where both micros transmit and receive at 300bps; 1200/75, with the host transmitting at 1200bps and the user terminal transmitting at 75bps; and similarly the 75/1200 where the host transmits at 75bps and the user transmits at 1200bps; and finally the 1200/1200 where both transmit and receive at 1200bps.

There are modems available which are capable of transmitting at all these speeds.

Other features to consider include auto-answer and auto-dial. The auto-answer

function enables the modem to answer the phone and prepare to receive instruction without need for any human assistance. Auto-dial makes life much simpler when dialling engaged numbers. Auto-recall will try to contact any unobtainable numbers.

What to do with it

Particularly with regards to business users, the two most popular reasons for purchasing a modem have been Prestel and Telecom Gold, both inexpensive ways of accessing large amounts of general data ranging from weather forecasts to flight times.

Whereas Prestel has become known for its vast base of information, Telecom Gold is perhaps most widely known as the biggest mailbox service in England.

Mailbox

A mailbox system enables you to send messages to another user, in this country or abroad. You write the message on your computer, send it via the modem to a mainframe line which then stores the message until the person you sent the message to logs on to the system. The message is then displayed on his screen to be read at leisure.

Bulletin Boards

Bulletin boards are appearing in large numbers as more people enter the field of communications from the home. Set up by individual enthusiasts, these can provide information ranging from computing advice to a forum for music views.

Compunet and Micronet 800

Micronet 800 and Commodore's own Compunet are the two networks you will probably hear most about. Both offer a comprehensive selection of services. You can take or offer advice to other users, take advantage of the free software or purchase programs, play games or talk with other users.

MUD

MUD, a multi-user game created on mainframes at Essex University, has gained rapidly in popularity. For the cost of a phone call, you can take part in a vast game of dungeons and dragons with other users.

In addition to Essex MUD, there is Compunet's own MUD and British Telecom have been promising a version which should be released soon. (Keep up to date with all the MUD gossip in our regular MUD column.)

MODEMS

Product	Features	Machine	Price	Company
Multimodem	Multi-speed, baud rates of 300/300, 1200/75, 75/1200. Auto-dial, auto answer, auto-mailbox	64	£98.50	Miracle
Tm512E	Auto-dial, auto-answer, operates at V21 and V23. EPAD		£339	Tandata
Voyager	Operates V21 and V23. Auto-dial, auto-answer, optional add-ons	64	£79.95	Modem House
TM 110	1200/75 bps V23 full duplex mode. Able to store and access data in its own CMOS RAM. RS232 micro interface, auto-dial/auto-recall and auto transmission of ID. Up to 8 telephone numbers can be stored.	64, VIC 20	£99	Tandata
TM 200	Includes all the features of the TM 110 and in addition to 1200/75 baud full duplex also 75/1200 bps full duplex, 1200/1200 half duplex to allow two micros to 'chat' and 300/300 bps full duplex with answer and originate mode allowing use with many conventional databases.	64, VIC 20	£173	Tandata
Modem 1000	Can access Prestel, Micronet, with option to access B.T. Gold and 1275 Bulletin boards. Free quarter's subscription to Micronet with every purchase from Modem House.	64, 128	£99.95	Modem House
WS 2000	Single-unit multi-standard, multi-speed, offering a very wide choice of operational facilities. Can transmit and receive at 300 baud full duplex, 600 baud half duplex, 1200 baud half duplex and Prestel/Telecom Gold.	All with RS232/serial interface	£129.95	Miracle Technology
WS 3000 V2123	Fully intelligent, keyboard-instructed, autodialling, auto-answering. Supports both CCITT and Bell standards, 60-number internal telephone directory, speed buffered RS 232 port. Allows 300, 600, 1200, 1200/75 and 75/1200 baud rates.	All with RS232/serial interface	£295.00	Miracle Technology
WS 3000 V22	Adds 1200 baud full duplex	All with RS 232/serial interface	£495.00	Miracle Technology
WS 3000 V22bis	Adds 2400 baud full duplex. Protect 3000 Data Security Option £98 when purchased with modem.	All with RS232/serial interface	£650.00	Miracle Technology
Commodore Communications Modem	1200/75 V23 full duplex, asynchronous operation. Easy to fit, easy to use. Connection direct to the cartridge port of a 64 and direct to a British Telecom series 600 socket. Compunet software held in ROM (8K) for immediate interaction after switch on. Soft load options provide 64 to 64 direct communication. One year's free subscription to Compunet.	64	£99.99	Commodore

COM- DRUM

DIGITAL DRUM SYSTEM FOR THE C64

- A real digital Drum Machine
- Supplied with 10 pre programmed rhythms to start you off!!
- Very simple to use with on screen menus
- Save sequences to tapel/disc
- Polyphonic sound
- Real time and Step sequencer
- Complete with all software
- Contains a full Digitally Recorded "Drum Kit" i.e. 8 PCS—Kick Drum, Snare, Hi-Hat, Tom Tom etc
- NOTE: These are real drum sounds not synthesized

The Datel Sampler now brings you this
technology at a sensible price!

- The Sampler allows you to record any sound digitally into memory and replay it instantly at any pitch, backwards, forwards, ascending scale, descending, with echo, reverb, flanging, endlessly looped etc. Truly professional hardware incorporating:
- Full 8 bit D to A and ADC conversion.
- Line or MIC input, line output and feedback control.
- A comprehensive software packing including:
- A live effects menu with echo, reverb, digital delay, flanging etc.
- Full Sample editing facilities with review and on screen frequency plotting.
- A powerful sequencer with direct input and editing.

Available now complete hardware/software package. Complete with microphone.
(Disc software please add £2).

128

If you're as
impressed
as we are
with the new
Commodore
128, you'll be
even more
impressed with the new software that's
appearing for it now! Already we've got
SuperBase 128 (£99.95 £85.00!),
SuperScript 128 (£79.95 £69.95!),
and the amazing VizaWrite Classic 128
(£99.95 £89.00!)... so watch this space!

Although we are by far
the largest UK retailer
of SuperBase, VizaStar
and VizaWrite for the
Commodore 64, for
over five years we
have supported
the best software for
all the Commodore business machines!
So if you have a CBM/PET 3000, 4000,
8000, 700 or PC, then don't forget us...
we haven't forgotten you! Why not phone
or write for our CBM/PET catalogue?

Superscript 64

All the features you'll ever need for professional
word processing... and then more! Unrivalled
240-column text handling, variable width
screen, word-wrap, cut-and-paste, four-way
scrolling, document linking for unlimited capacity,
global search-and-replace, help screen, full memory calculator,
row and column arithmetic, menu or keyed commands with command strings,
background printing, complete letter quality print control, spelling checker with
both UK and US disk dictionaries, comprehensive four part user manual...

Superbase 64

Transform your Commodore 64 into a full
featured professional database system,
with up to 1000 characters per record on
up to four screens... and up to 128 items
per record, definable as key, text, numeric,
result or date... in files of up to 16 million
characters! SuperBase 64 even has calculator and calendar functions, easy input
from word processor or data files, both menu-driven and program control, sorting
and searching, fully definable report and screen formats... Superbase 64 is essential
if you want the most from your 64! Supplied on 1541 disk with excellent tutorial
and reference manual, plus audio learning tape...

NOW ONLY ~~£79.95~~ **£69.95!**

Jetpack

Your programs
will really
take off with
JetPack 64!
100% compatible
with CBM Basic, Jetpack compiles
Basic programs into machine code,
running up to 25 times faster...
using up to half as much memory!
And it even accepts Basic extensions
and machine code routines as well!

PAZAZZZZZzzzz!

Pazazz

You know those incredibly boring bits of animation that sometimes interrupt the loading of games? Quite clever first time you see them but a Pain in the bum when you have to sit through them time after time? (Super Huey is an example that springs to mind.) With Pazazz you can make your very own clever-but-boring bits to ensure that nobody ever again sits in the same room as you and your computer!

The blurb on the cover of this soporific, disk-only offering from Commodore promises the user the opportunity of directing and producing his or her own theatrical performance. In particular, it offers the facilities of designing scenery and costumes, writing music and choreographing the action. Whilst one cannot actually refute these claims, the reality is not quite up to National Theatre standards.

"Integrated package"

Producing your own theatrical performance on computer? Tony Lydeard finds limited results with Pazazz, while Julian Rosen doesn't fare much better with Screenplay.

Pazazz is essentially an integrated Graphics, Music and Animation package. It enables you to draw a picture to use as a background for a figure to dance around in front of. The figure is "designed" separately by colouring in a person-

shaped template. The animation section allows you to dictate a series of positions for the figure you have previously coloured in. The head, upper arms, forearms, torso, thighs, and shins can all be rotated and the figure itself can be positioned anywhere on the screen – when the sequence of positions (up to 1000) is played back, the figure appears to dance. The Music section allows you to string together a sequence of notes from 5 octaves. Two voices are available, each with a choice of four sounds. A synchronisation facility permits you to fit the movements to the music.

"Works beautifully"

It all works beautifully – although the controls used in the graphics sections are a little idiosyncratic. I had a lot of

trouble remembering that the cursor down button scrolled the selection left and that the space bar actioned a command (sometimes – at other times, it was the return key). Some excellent results are possible with a liberal amount of patience.

Background, Figure, Movement sequence and Music are all saved to disk as separate files, making it possible to select different backgrounds or different figures for the same dance, for instance.

"Dreadfully boring"

Four scenarios are included on the program disk to illustrate what can be done with the program and very well put together they are too. The trouble is that what you end up with is so dreadfully boring. No matter how brilliantly the Background, Figure, Music and Dance sequence are designed, the combined result is a single figure dancing in front of a fixed scene. Andrew Lloyd-Webber has no need to feel threatened.

The disk is so heavily protected that it failed to load on a number of occasions. Needless to say, it produced the usual banging and thumping from my poor old 1541. The manual is up to normal Commodore standards – excellently produced and extremely thorough but difficult to find your way around. Overall, I find little to recommend.

Contact: Commodore UK, 1 Hunters Road, Weldon, Corby, Northants, NN7 1QX.

Screenplay

Screenplay, the latest offering by the educational software producers Macmillan Software, is a poor attempt at DIY computer animation.

According to the Blurb on the very eye – catching box, the contents will do no less than enable you to 'Make an exciting programme, just like the professionals!' Anticipation was the first thing to strike me as I opened the package, 'Could this really be possible on the poor Commodore?' I asked myself.

While waiting for the program to load I sat down and read the booklet they had so thoughtfully enclosed in the package. Almost two thirds of the booklet was dedicated to 'How the professionals do it'. In all fairness this part of the booklet gave a very interesting insight into the workings of television, animation, and the tricks that can be accomplished using both.

I was therefore waiting with baited breath for the program to load. After a few minutes the title screen appeared. Alas, fulfilment was not forthcoming. Never mind, thought I, trying with unequalled effort to summon up more enthusiasm than it actually deserved. So I progressed with, what later became apparent, were anything but well documented instructions.

"Icon controlled"

The program is controlled by ICONS, each representing an option. I couldn't help but feel grateful to the authors, as it soon dawned on me that the program was so complex to use that one had enough to worry about without a new command language to learn, or some other such delight many publishers seem to enjoy providing with their software.

After re-reading the instructions, and viewing the 'Demo' provided with the program, which only went further to make the program even more unappetising, I sat down to compose my own production.

"Not convincing"

I encountered many difficulties, which, to my mind, the authors could have expanded their documentation of quite considerably. Such areas as Sprite Design and Background were two of them.

After approximately one hour I was ready, for a few seconds of 'film' time. Now as an enthusiast of animation I can appreciate that much effort, time, and attention is put into a few seconds of film. But this was not film, just my humble micro, and to be honest nothing but film can really capture the true magic of animation.

Consequently, by piecing together numerous 'takes' as they have so originally called them, I wasted an hour on a few seconds of sprite movement, accompanied by some simple music played on one voice, and some scattered background hi-resolution sketches, none of which were particularly convincing.

To summarise, Macmillan Software have tackled the decidedly unmanageable task of 'DIY Animation' with the best results one could hope for. I could not recommend this product to anyone, basically because I feel it gives entirely the incorrect impression of what animation should be like. The booklet provided gives quite a detailed insight into the world of film, perhaps too much so, the complexities of the program were not aided by the briefness of the instructions. A verdict?, All that glitters is not as good as it may appear!

Music Software.

Music made easy on your Commodore.

☐ **£19.95 Music Keyboard Overlay**

Turns the Commodore 64 into a marvellous musical instrument. Music Maker enables the user to create electronic sound effects or synthesize dozens of instruments – even become a recording artist. Contains everything needed to make music right away: Music Keyboard overlay: easy to understand software program with pre-programmed songs for instant enjoyment: songbook and music tutor with 28 famous popular songs, featuring music notation for those who can and cannot read music; complete user's guide to the Music Maker program. Packed in handsome full-colour gift box. With disk or cassette. **£19.95**

☐ **£69.99**
Sound Sampler

Can be used to record voice or sounds which can then be played back higher or lower in pitch, reversed, edited or looped. Can also be used as an Echo Chamber, pitch converter or drum machine. Comes complete with microphone. **£69.99**

Sound Expander

A sound module using the latest digital technology to produce high quality synthesized sounds e.g. vibraphone, electric piano, flute, playable up to 8 notes at a time, plus Rhythm accompaniment and easy play features. **£99.99**

☐ **£14.99**
Sound Studio – Professional Synthesizer and Recording Studio

Record music on three tracks (6 tracks with MIDI) either note by note like a word processor or in 'real time' as you play it on the keyboard. Play it back and 'Edit' if necessary. The synthesizer turns your computer into a sophisticated polyphonic synthesizer, with full control over all the usual sound parameters. **£14.99**

To: DIRECT MAIL MUSIC, 627-631 HIGH ROAD, LEYTONSTONE, LONDON E11 4PA

GRAFPAD II— THE ULTIMATE IN GRAPHIC INPUT DEVICES FOR THE COMMODORE MICROS

The first low-cost graphic tablet to offer the performance and durability required for business, industrial, home and educational applications. It's small, accurate and reliable. Needs no adjustment or preventive maintenance. **GRAFPAD II** is a unique product that brings the power of modern technology under the control of the user.

GRAFPAD II:

- A brilliant British invention manufactured in Gt. Britain, unequalled in the world of graphics input.
- Ferranti's space age technology makes the Grafpad II unique in its digitising technique.
- The culmination of 3 years of advanced research to create a final graphical solution for the world computer market.

IT COMBINES IN ONE DEVICE ALL THE FACILITIES OF PREVIOUS ATTEMPTS AT INPUT DEVICES. THE APPLICATIONS ARE AS NUMEROUS AS THAT OTHER COMMONLY HELD DEVICE—A PEN!—AND INCLUDE:

- Option Selection ● Form Input ● Data Collection ● Logic Design ● Circuit Design
- Picture creation ● Picture storage
- Picture retrieval ● Construction design
- C.A.D. ● Text Illustration ● Games
- Pattern Design ● Education ● PCB Design

An Artistic Rodent

Just in case there is anyone left who doesn't know what a mouse is, it's a little gizmo which moves a cursor around the screen corresponding to its own movement around the table top. They have become inseparably associated with icon-operated software – a purpose for which they are ideally suited. Icons are little pictures on the screen. Moving the cursor the little picture activates that part of the program which icon illustrates.

The MS 2000 from Wigmore House is conveniently sized to fit the palm of the hand and is provided with 1.2 metres of flex – quite sufficient for its purpose. Its rubber-coated metal ball responded perfectly on all the surfaces I could think of and the push buttons have a good positive “click” to them. Cursor response is excellent.

The icons in “Cheese”, the Graphics software that is supplied with the Wigmore mouse, are ranged along the bottom of the screen alongside two numbers which give the X and Y coordinates of the cursor position. The coordinates are reckoned from the top left hand corner of the drawing area and give a unique identification to each pixel available to the artist. The “canvas” is 159 pixels across and 167 deep, with an additional 136 rows available by use of the scrolling function.

“Icon-driven”

The first group of three icons depict a cat's head to represent the Undo function (i.e. cancels the most recent operation), a regular pattern (one of 32 available) which is used in the various Fill functions, and a rabbit's head. The latter cycles three sets of seven icons in the adjacent group. When a function is actually being used, the group of seven icons is replaced by a colour grid and either an inkpot or a pencil, the colour of which determines that of the trace or cursor respectively (the aforementioned rabbit's head is

Say ‘cheese’ and you’re looking at the latest graphics mouse. Tony Lydeard enthuses over its features and ease of use.

replaced by the icon of the function in use).

As with most Graphics software, there is the facility to draw freehand in a variety of thicknesses and textures of line. The degree of control when trying to do this with a joystick is minimal, as anyone who has tried will testify. With the MS 2000 it's a doddle – you just write or draw on the table and the mouse transfers your efforts directly to the screen. A minor niggle here – the MS 2000 uses an area of just 50mm x 45mm to deal with the available screen area. I would personally have preferred slightly less sensitivity.

There are also the normal line and rectangle functions, the latter utilising the “rubber band” technique of defining the opposing corners. The circle function is a little unusual in that

it is really an ellipse function – you define the centre of the ellipse and then the major and minor axes with a “rubber band. If you want a circle you have to make sure that the rectangle is a square – if you see what I mean!

“Ellipse function”

Cheese does not have the “ray” function that some programs offer but then it doesn't really need it as the starting point's coordinates can be memorised.

Interesting features include a Reverse facility, which enables predetermined areas of the screen to be “flopped”, either laterally or longitudinally; a Mirror function, which reflects

your drawing in the other half of the screen as you draw (the “other half of the screen” can be defined in any four ways, which can be used simultaneously if required); a Copy function, which enables a predefined rectangular area of the screen to be reproduced, and a Tile pattern. The tile feature enables areas of the screen to be filled with one of 32 different repeated patterns (my second minor niggle comes in here – if you overshoot the pattern you want, you have to cycle through all 32 again as there is no reverse).

Your works of art can be saved to disk or tape, depending on which version you obtain or printed out on a Commodore printer. Both worked well although I could have done with a few more disk functions. The copy I have been using was a preproduction one adapted from the version, so perhaps the version will have improved.

“Good value”

At £64.50 for the tape version or £69.00 for disk, MS2000 isn't cheap. To my mind, however, it is good value. The hardware, as I mentioned earlier, is sturdy and reliable. The ball can be removed for cleaning, which is a sensible feature. The software is simply the best graphics package I have come across. The word-processed manual leaves a lot to be desired but it does explain how to work the thing. The only serious shortcoming I found was the lack of information on how to incorporate mouse control into your own programs or to use your illustrations indepently of the generating software.

If you're saving up for a Graphics package, I would strongly recommend saving a little longer in order to get your hands on the Wigmore mouse – it's triffic!

six-four supplies company

p.o. box 18, whitstable, kent ct5 1tj

128 64 PLUS-4 C16 SOFTWARE

There are just too many items for the Commodore range of computers for us to list here. We can supply software for the 128, 64, Plus4 and C16 which embraces home, business, personal, recreational and educational uses. In short: if you see a product advertised or reviewed - or are simply after an old favourite - please at least try us out, or simply ask us what is available. We have a worldwide customer base of thousands, with many 'regulars' who are happy to help and advise. Why not join them? Send now for our lists (AS SAE).

FREE ADVICE - Ask before you buy. If, for example, you are thinking of using your computer for business purposes it can be foolhardy trying to achieve the impossible by using entry-level 'hobby' software. Likely as not this will put you off 'computerizing' for good and may have very serious repercussions as well! We can advise you on the selection of suitable software - and that doesn't mean old-fashioned outdated stock which some people have rather a lot of on their shelves! If we have to order it specially for you, we will - or direct you to a competent supplier. There's no commitment to buy from us - but as we offer continued specialist after-sales support, perhaps you'd be wise to do so! 'Quickie' questions by phone, others by letter please.

LOW / LOWER / LOWEST PRICES!

Found a low price? Well, we'll try to match or better an advertised price. But as we believe service and future support must be considered as a price component, this offer is restricted to what may be described as 'serious' software only. On certain products we provide a unique one-month **PRICE PROMISE** which credits you with the difference if you find goods on regular sale elsewhere at a price lower than you paid. Must be worth a phone call: it could save you £££! Full details available.

ORDER IN CONFIDENCE: Same-day first-class despatch for stock items. Letters to PO Box 19 Whitstable, Kent CT5 2AN. Or make an Access/Visa order by phone (24-hour, partly manned).

Telephone Orders: (0227) 266289
CompuNet Courier ID: JPMW
Telecom Gold Mailbox 72: DTB10183
Telex: 265871 MONREF G

C16 / PLUS-4 SOFTWARE - An increasing number of recreational and utility titles available for these machines. For the Plus-4, business software includes the incomparable SuperBase.

64 IMPORTED SOFTWARE - We can offer a full range of US-sourced software covering business and leisure interests. There are new low prices on some of the now large range of Infocom adventures (for example HITCH-HIKER'S GUIDE at £24.95). New titles will include JET (d45.00) and there are old favourites such as its

incomparable predecessor FLIGHT SIMULATOR II (d45.00 c40.00). New for wargamers are further titles in the Strategic Simulations series. Price match promise on all available US-sourced software.

PRECISION SOFTWARE - We are justifiably enthusiastic about this particular range of software. If you are after wordprocessing for the 64 or 128 the most versatile program of its type is SUPERSCRIP. On the 128 this word program offers 40/80 column display, and two working text areas or room for SUPERBASE. The latter is arguably the best database management program available on any home computer - usable for almost any leisure or work activity where information storage and manipulation is required. The built-in database on the Plus-4 can best be described as pathetic in comparison: if you bought this machine for business use, you really ought to buy Superbase. Learning to type? Why not teach yourself at your own pace using SUPERTYPE? Best of its type on the 64. Please phone for latest prices on this Precision software.

128 CP/M SOFTWARE - Want to learn to use WORDSTAR and thus gain a very valuable employment skill? Or maintain familiarity with a program you have used at work such as dBASE III? Whatever your reasons for wanting CP/M, now there's 'big name' business CP/M software available specially formatted for the 1570 and 1571 (state drive). Includes products from Ashton-Tate, Microfit, MicroPro, Microsoft, Ryan-McFarland, Sorcie, Saesoft and others. A full selection of business and recreational software available for other computer types as well (state requirements and machine type). Specialist 'bespoke' applications software also available for many different types of business.

DISCOUNT CLUB - We value regular customers and for these we offer a special discount scheme which gives worthwhile discounts for all types of software, regardless of machine type. So no problems if you change machines or decide to order for your friends or business colleagues. There's a minimum purchase requirement (six items at our normal prices) OR payment of an annual £10 registration fee - so it's not expensive. And savings can be considerable at least 15% and sometimes more. Full details available.

BARGAIN BIN - Ask for our special list of software of all types at real bargain prices.

CATALOGUE - A much-revised catalogue describing in some detail the thousand-odd items of software, related peripherals and books for the entire Commodore range is nearing completion. There's sure to be a huge demand so apply now and you will be advised when it is ready (SAE please). To partly off-set costs there will be a charge for the catalogue but it will be free to all customers placing past, present and future orders totalling £25 or more in value.

MS 2000 COMMODORE MOUSE

The MS 2000 is a beautifully designed peripheral used to move the cursor simply and quickly around the screen like a drawing pen, paint brush or air spray. This popular device is so natural and friendly to use that it will add an exhilarating new dimension to creative art, CAD, design and business drawings such as graphs, pi charts and plans. Full 16 colour simultaneous drawing and painting facility.

The MS 2000 is a high quality mouse with a RUBBER COATED BALL which is quiet and will not lose accuracy through slippage. The hardware incorporates an OPTICAL ENCODING technique in the mouse which has a resolution of 100 points to the inch. It is accurate, reliable and repeatable.

ONLY £64.90 INCL. MS2000 + CASSETTE. DISK OPTION £3.50 (£1.50 p&p)

CompuNet "must be the best"
Popular Computing Weekly "hardware excellent, software technically stunning"

Can you find...

The Real You?

Ever wondered who and what you really are? Now is your chance to find out with this program 'based on major tests'. Sue Pearce investigates

"Only you need know how odd you are", states the introductory blurb to this package. How reassuring!

The 'privacy' offered by the computer is often one of the biggest selling points of programs which promise revealing information about yourself as a result of sometimes intimate questions. The thinking behind it is that the user will give a more honest answer to questions if there is no-one to see the results but themselves.

However, do people really regard the results dished up by computer as gospel? How many people want to find 'the real you'?

SATISFACTION

(Are you satisfied with your job?)

As far as program content goes, this package is one of the more entertaining I have come across. And it is as a form of entertainment that I feel these programs should be regarded. Admittedly, most claim to be based on vast research and tests, but if the computer tells you that you are compatible with that partner you have been so happy with for the last 10 years, I wouldn't leave them as a result!

The Real You contains 16 tests taken from a Dr Michael Nathenson's The Book

BODY

(Are you satisfied with your body?)

HI-TECH

(Are you in touch with the high-tech revolution?)

STRESS

(How much stress do you have in your life?)

of Tests. The program is divided into six sections covering important areas of your life: work, intellect, personality, lovelife, anxiety and views.

Each section is made up of a series of questions. The screen display for each question is made up of two or three windows. The top window contains an instruction on how to answer each question. The central window contains the question or picture, and the lower window contains the responses from which you are must make your selection. You respond to each question via the cursor keys or a joystick, whichever is your preference.

A score is displayed in the form of a bar on a scale on completion of each test. This shows the minimum and maximum scores possible and your score as compared to the population in general. It's then back to the book to read the analysis.

If you enjoy this type of program then The Real You is certainly worth looking at. My only hesitation is that when you have completed the tests once the program becomes limited in its interest. That's assuming you don't cheat and enter different responses each time. Admittedly you can test yourself against friends and relations – but will you want them to know the details of your sex life?

So, at the end of all these tasks (and an enjoyable afternoon trying to prevent the rest of CCI peering over my shoulders to discover my sordid secrets) am I who I thought I was...well, that would be telling wouldn't it?!

RELATIONSHIPS

(Are you and your partner likely to succeed?)

THE OFFICIAL GUIDE TO OXFORD PASCAL, by I Sinclair — £7.95

PASCAL is a very popular language with the professional programmers as well as the universities of this country. Very few people at this level bother with BASIC and a working knowledge of PASCAL is necessary if you wish to aspire to a career as a programmer or just collect a degree in computer science. The main value of PASCAL lies in the technique of how programs are built as well as the ease of portability across to other machines. PASCAL is highly structured and I must admit from personal experience the spaghetti-like nature of BASIC is very frustrating to take at times, particularly when trying to follow a BASIC program written by someone else. It is difficult to leave an imprint of personal programming style with PASCAL as opposed to BASIC, but in general I avoid BASIC whenever possible.

I am a long time fan of COMAL which shares the best features of PASCAL and BASIC and I would recommend this as a convenient route to PASCAL. In fact, given my way I would like to see the end of BASIC as the de facto standard — certainly as far as Commodore machines are concerned — and replaced by COMAL. It may be the fate of the Jupiter ACE that puts manufacturers off from implementing another resident language, (the ACE took the brave step of using FORTH as resident which really was a little over the top).

One of my interests in personal computers extends to programming languages and although I would freely confess to weaknesses in some languages, I do enjoy having a dabble whenever possible. I have always liked Oxford PASCAL since it is the most accurate implementation for the C64, the only limits being the hardware in terms of memory or disk access speeds. Nevertheless if you are serious about acquiring programming skills then PASCAL is worth learning. The only shortcoming of Oxford PASCAL is the supplied literature in the form of a booklet, which was very light on the subject. Yet this fault could not be laid at the door of Oxford Computer Systems Software Ltd, since they are mere suppliers of compilers and not language teachers. So, having bought your Oxford PASCAL compiler there was an immediate need for a book on three important aspects; one, learning how to fully use the compiler itself, secondly, how it works in terms of the features of the C64 and thirdly, a practical introduction to PASCAL.

Ian Sinclair is prolific writer and I have always found his works to be very readable. I fear though that in this book he has attempted to cover too much ground. He has made a major effort to cover everything commencing with a 'how-to' approach to programming in PASCAL and really leaving the most useful matters until the final chapter which is entitled "Assortment". The author takes the reader through the various nuances of PASCAL such as procedures, types and string handling before skimming lightly over the surface of the C64's sound and graphics abilities.

Admittedly one of the strengths of PASCAL lies in its portability between machines, although at the C64 level it is unlikely that someone will want to use this machine as a vehicle for PASCAL software development. What I would have really liked to have seen is more and longer PASCAL programs, rather than the short and simple ones in the book. Maybe Ian has another volume up his sleeve which will assume PASCAL literacy and concentrate on the features of the C64. He does make it clear in this book that one of his aims is the coverage of features suitable to most readers, so perhaps my thoughts are those of the minority.

This book is certainly worth buying if you have purchased Oxford PASCAL already, for whilst the manual supplied by Oxford with the compiler is adequate, it would be unfair and unrealistic to assume a full blown tutorial on PASCAL for the price you have paid to Oxford. It really should be regarded as a continuation of the user manual, so we wait with bated breath for a definitive programming book on C64 PASCAL.

The book itself consists of about 160 pages which breaks down into nine chapters, an appendix and index. No complaints about the typesetting or general quality of this book, although the price seems to be slightly in excess of what I would like in terms of the total number of pages. Recommended.

COMMODORE 64 ASSEMBLY LANGUAGE ARCADE GAME PROGRAMMING, by S Bress — £14.20

It has long been accepted that to produce reasonable games on the C64 which use the full features of the machine, the programmer has to resort to assembly

language. The principle reason being speed of execution since a game contains many elements, sound, graphics and arithmetic functions all of which can be done using BASIC but which would take hours to fulfill. Another route using a compiled language such as PASCAL or the halfway houses of FORTH or COMAL. Probably FORTH is the next best choice to assembly language and this is the approach taken by Oasis Software in their excellent 'White Lightning' package. Quite why assembly language causes so much fear amongst users is a mystery to me; yes it looks difficult but, like riding a bicycle the hardest part is actually starting off.

This book uses the technique which is now common in a lot of programming books originating from the USA. The listings are provided in pure assembly language for those users who have an assembler, hex dumps for monitors only and BASIC loaders for the poverty stricken. The last two methods are not really serious options unless you are a demon keyboard operator and have plenty of time. The book however is essentially assembler orientated and specifically the Commodore Macro Assembler Development System. The reason for this becomes apparent on delving further into the text, the programs make great use of macros to speed things up and cut down the amount of typing. If your assembler does not support macros this does not preclude the programs entirely, but just means repetition. I was particularly pleased that CBM assembler was supported, apart from the fact that this is the one I use and like, the macro options have always been a little mystifying, courtesy of the ever helpful Commodore documentation. I understood how a macro worked but not how to use the facility, this book explained and showed me how.

Don't run away with the idea that this book will turn into a Crowther or Minter clone overnight, it won't. What it will show you are the elements of constructing arcade games. The sound and graphic features of the C64 are covered relatively well and with the help of other source books you should come up with something that will at least impress the family and friends. The magic ingredient of originality is left up to you and the mechanics of how the C64 operates such as bank-switching, raster interrupts and other machine dependant properties are well covered.

The book provides the purchaser with a very useful macro library of routines which, although directed towards games are food for thought in terms of utilities.

Personally I found the strength of this book not in the subject matter but in how to use macros and specifically the Commodore Assembler. Beware the false beauty of macros though, variables are only effective locally and although your source code can look very lean fast, macros are memory consuming and this need to be carefully watched in size restricted areas such as that old favourite, the cassette buffer.

As well as providing a full listing of two arcade games for the patient reader to type in, there is also a full discussion of another of one of my favourite tools, the Koala Pad. The book includes unpublished details on Koala graphics such as relocating the high resolution screen and file transfer, both into and out of Koala screens. Very useful.

My only complaint about this book was the program listings have not been typeset and are left in dot-matrix. It happens that the printer used by the author looks as if a new ribbon would have been helpful but the book publishers have to offset legibility with the program accuracy and I'm all in favour of the latter. For 260 pages, the book is value for money. Recommended.

COMMODORE 64 COLOR GRAPHICS: AN ADVANCED GUIDE, by Shaffer — £14.50

The title of this book was a little ambiguous in the use of the word Advanced, but so many books now use this ploy in order to

sell themselves that I always view with suspicion the inclusion in the title 'Reference', 'Advanced' or 'Guide'.

The book is part of a series on C64 graphics, the earlier on being pitched at the new user. Similar to the arcade games book reviewed earlier machine code is almost a must when utilising the high resolution graphics capabilities of the C64 and curiously this book avoids assembly language, apart from a listing in Appendix D, and the programs are entered as BASIC data statements. If there is one thing more boring than waiting for a cassette to load, then it must be keyboard entry of ream after ream of data statement numbers. I certainly find keying in an assembly language program provides a lot more interest than keying just pure numbers, even when I don't understand the function of the program. I am sure that a lot of young, potential machine code programmers never progress beyond BASIC because they imagine assembly language consists purely of bare numbers, and who can blame them.

Where this book did prove interesting was in the explanations of the mathematics of object rotation. I don't know about you but I have grown rather tired of graphics books that provide grid designs of aliens, monsters and other general science fiction pap. Exploring the ins and outs of polar and cartesian geometry is not my idea of a happy pastime, but like most aspects of mathematics, put it into a frame of reference that is relevant to the reader and yes it immediately becomes of use and value.

Even more interesting was the all-to-brief exposition on colours and how to use them. At this point I should admit that on a scale of artistic ability my position would be the next one up from matchstick men. Before the C64 came into my life the thing that I could draw well were cards in the gambling schools whilst attending polytechnic, and even then, not altogether too consistently! The concepts of contrast in using different colours was completely new to me and provided some fresh ideas in this vein.

I found the programs within this book were to a high standard and although they worked very well at a definite level of user-literacy certainly not that suggested by the title. In fact I have a sneaking idea that there is another book yet to come. In one sense the book was insipid; looked at another way, there was some new material, not so much connected with the C64, but with the fundamentals of graphic art. This book really stumped me for a recommendation, since it falls between the two stools of the machine and the subject. I fear that there is little more to be uncovered and written about in terms of the C64 hardware facilities but there is a need for a book dealing with the day-to-day applications of the C64's graphical abilities. This book went forward a little in the direction of the latter; I would like to see more. The use of only two printed colours was restrictive bearing in mind the price, although there are 310 pages. Examine the contents of this book carefully before you decide.

BILL DONALD

MCT ESTIMATOR

Professional estimating package designed for use in small businesses employing A BBC B or CBM64 micro computer, disk drive(s) and TV. A dot matrix printer would be a distinct advantage. The program should save up to 75% of the time normally spent on job costings.

Win a
Max-Pack!!

Following his success in the film and television series, Max Headroom is now the star of a computer game.

You could be one of the first people to play the game by entering CCI's Max Headroom competition. In addition to the game, we're giving away Max Headroom books and the video!

All you have to do is answer four easy competitions and a Max-pack could be yours.

The Competition

Below are four easy questions to answer. If you haven't seen the film, the TV series or read the books (where have you been, and do you know what you're missing?), you may well find some clues in the Max Headroom feature on page 28.

The Prizes

1st: Two Max-packs of the video; Max Headroom's Guide To Life; Max Headroom – the book of the film; and the game.

2nd: Three Max-packs of Max Headroom's Guide To Life; Max Headroom – the book of the film; and the game.

Prizes will be awarded to the senders of the first five correct entries pulled out of our competition sack. The closing date is 7 March 1986. If you do not wish to cut up your copy of CCI, please feel free to send us a photocopy of the completed competition page. Send your entries to:

Max Headroom Competition,
CCI,
Finsbury Business Centre,
40 Bowling Green Lane,
London EX1R ONE

Please answer the following questions:

1 What is Max Headroom?

A _____

2 How did Max get his name in the film?

A _____

3 Which TV station spawned Max?

A _____

4 Which TV station gave Max his first big break?

A _____

Name _____

Age _____

Address _____

BACK TO THE FUTURE

Win The Game

You've read our film review, been treated to a glimpse of the future with our game preview...now enter our Back To The Future competition!

From the sneak preview that CCI was allowed, the Back To The Future game looks like being truly **AWESOME**. We are giving you the chance to win one of 10 free copies of the game, **PLUS** a glamorous CCI T-Shirt.

The Competition

Our photograph shows inventor Doc Brown in a situation he would probably rather not be in.

What we want you to do is to come up with a caption for this picture. It doesn't matter if you haven't seen the film, just use your imagination.

The Prizes

Ten prizes of the Back To The Future game and a CCI T-shirt will be awarded to the senders of the 10 most imaginative and wittiest captions.

The closing date for the competition is 7 March 1986. If you do not wish to cut up your copy of CCI, please feel free to send us a photocopy of the completed competition page.

The address to send your entry to is:

Caption Competition,
CCI,
Finsbury Business Centre,
40 Bowling Green Lane,
London EC1R ONE.

STICK · GRIP STICK · GRIP STICK · GRIP STICK · GRIP STICK · GRIP STICK · GRIP

Max Headroom is the world's first computer-generated television personality. He was created as a result of a request from Channel 4 for a programme to showcase the best of rock and pop videos. The concept of computer-generated graphics with a human voice-over to provide the links between video clips was developed. From this original concept came Max Headroom, the computer-generated TV host.

The idea met with much enthusiasm at Channel 4. But who was Max? A personality and history were required. This problem was solved with the commissioning of a film of a one-hour drama telling the story of the creation of Max Headroom and his emergence as the presenter of a 24 hours a day rock video show. The scene was set for the Max Headroom Show series.

"Max is an image whose time has come – the perfect television presenter. No temperamental outbursts, no hangovers, no holidays, no salary. Constant, 24 hours a day."

Max Headroom – the Film

Max Headroom is set 20 minutes into the future in a world where television is the only growth industry.

TV networks battle for top ratings. Network 23 the top-rating network, mainly due to compressed TV commercials called Blipverts. These happen so fast they are embedded in the viewer's mind before they can switch channels, but they have an appalling side-effect.

Investigate reporter, Carter, attempts to reveal the terrible secret of this network's success, but meets with an accident. This results in Carter becoming the first computer generated host – Max Headroom.

Max Headroom is peddled to Bigtime, a pirate TV station, by a couple of heavies who think it is a piece of techno-junk with some commercial value. But the 'Max Box' sends Bigtime's ratings soaring.

Not everyone is as thrilled and descend on Bigtime...

"Max Headroom has developed into a truly international multi-media personality. He is to television what Coca-Cola is to soft drinks and McDonalds is to fast food. Max has one thing in common with almost every person in the Western World. They watch TV. Max is TV."

Achievements of Max Headroom

*The film has been nominated for two ACE awards in the USA.

*London magazine City Limits voted Max top TV personality.

*A second series of the Max Headroom Show is planned for production in early 1986.

*Two books, Max Headroom's Guide To Life and the Picture Book of the Film are available.

*A series of computer games based on Max Headroom are shortly to be released.

*Look out for Max Headroom merchandising.

Q. Why do you act like a computer-generated thing when you are really a human?

A. You're very kind. The more people that take me for a human, the more I shal impr-impr-impr-get better. That's what I "think".

ur past?

o and no in that order, but
nt to sell more copies you
nem round a bit. No
I kept the initials and
quiet name-swap with
Hesultine. I think he
sway back but I'm not
around in a flak-jacket
body.

**Q. Can you get "high"
on voltage charges?
How much room is
there in your
electronic world?**

A. I wish I had an electronic world, there's so little room in the studio, if I smile too broadly someone has to open the door! An, comedy - I can't resist it! About voltage, a very funny and frightening thing happened before my first show - pity, I've no time to tell you about it.

**Q. Do you play
computer games?**

A. Of course not, it's not much fun playing with yourself, and it's boring to win all the time.

**Q. Who programmed
you?**

A. Originally the producer, but now I'm almost completely self-programming, and I'm about to become the first ever computer-generated-producer/writer/performer - you wait and see the difference when it happens!

**Q. As a computer
generated screen
image, admittedly a
highly charismatic
one, do you feel you
are inferior or
superior to humans?**

A. Humans are a very special breed aren't they - good and bad, and I know some (my ex-producer included) who are really nasty little breeders! Ah, more jokes - if only my all-too-human writers could come up with things like that. But no, I feel superior to my public I'm simply content that they look up to me as they do.

**Q. Is there a Mini
Headroom?**

A. I don't know, try the Teletext service.

**Q. Who/what is Max
Headroom?**

A. A lot of people see me as something very special and I'm humble enough to accept other people's opinion - they're right. I was brought on to the networks to give them a little more pezazz, fizz, razzamatazz, and other words with lots of Zs in them.

**Q. What do you put
your popularity down
to? In other words,
what is the Max
Factor?**

A. Well it's not doing jokes like that. My popularity comes down to my very high degree of perfection, plus a strong element of modesty.

Max Headroom

Edison Carter's nose is itching! Network 23's ace reporter always has trouble with his nasal passages when a story doesn't quite add up. His sixth sense leads him to Network 23's tower block and his intuition points to floor 203 - the computer lab.

Max Headroom is the name on everyone's lips and Edison, helped by Theora, his controller, is hot on the trail of the black box which holds the Max Personality Generator.

Theora's 'Maxhunter' computer program is the only help Edison is likely to find. Linked to the Network's master computer, Maxhunter acts as Edison's eyes and ears in his midnight search.

His problems are huge; * The staff arrive at six A.M. so he must be finished by then; * He must control the lift by typing code numbers known only to the Director - and hopefully Maxhunter!

* Scores of security guards, two hired assassins and Bryce, the evil hacker who invented Max, all have vested interests in Edison's destruction.

Only you can help Edison to complete is quest.

Released at the end of February 1986, on the Commodore 64, Spectrum and Amstrad, A Quicksilver program with a recommended retail price of £9.95.

Mega-Review

URIDIUM

In the last year, Andrew Braybrook has received a deserved amount of praise and attention for the products he has released; none more so than his previous game; Paradroid.

In my view Paradroid was one of the best games of 1985, and his first release of 1986 - Uridium - would have had to be really special to live up to it's predecessor. Unfortunately it doesn't.

Uridium is just not quite as original an idea, even if the execution is just superb. The graphics are excellent with the same pseudo 3-D land underneath your ship, and a really nice touch when you perform a 180 degree spin.

The most noticeable thing about Uridium - hailed officially as the sequel to Paradroid - is that it really is little more than a really good shoot-em-up. This is not putting the game down, far from it. I think the game is excellent and have played it for hours, but with a little more care it should have been even better.

Musically Uridium is also good, and the effects (especially when

put through a stereo) are really arcade-like. When it comes down to it there are not that many really good shoot-em-ups being released at the moment, and Uridium shows how far that basic idea can be taken.

MOEBIUS

MOEBIUS

A new company's first product is usually the one which people judge the rest of their releases by. If it's appalling it becomes increasingly difficult to stem the downward tide. If, however, it's excellent, everything else falls nicely into place.

Moebius from Infinite is a game which will be a lot of different things to different people. It comes attractively packaged in a twin cassette box, and on loading it immediately looks as if a lot of care has been taken over the game.

You play - surprise surprise - Moebius, the "legendary mercenary". You must battle your way through various 'planets' in order to eventually reach the Controller who you must destroy.

With various scanners to ease your task, you fly your jet-pacque transport around the planet killing everything in sight, and using various shelters to hide from the marauding robots and minotaurs (eh? In space??).

Moebius is graphically very pretty, although it certainly owes a lot to the Ultimate Jet-Pac range of games. Sound too is good, but I seem to get a certain feeling that tells me the beauty of this game is only skin-deep.

Felix Says....

Having fought my way out of a certain persons 501's I am here to give you details and gossip on games, people, and general happenings at this time of year.

3 Times Evading

After changing the name of their latest release from Twister, Mother of Harlots, to plain Twister, to avoid a repitition of PCW's 'Bad Taste' comments, System 3 also seemed to have moved to new premises - although where these are is not quite certain. If Mark Kale reads this maybe he could contact me, I'd love to see a finished System 3 game, I've forgotten what they look like!!

Mud Owns Up

Mud should be ready for launch on March 1. This is the latest news, or so I'm told. As it is now nearly five months late I really hope it is worth the wait, though I am assured that it is!

Santa Claus is coming to Town

Although it is a little after the festive season I thought you'd all be dying to know which member of a large software house insists on wearing Father Christmas boxer shorts!! Information has reached me, from people

who assure me are CLOSE friends (too close if you ask me!), that a certain Andrew Wright from Activision is the culprit - but then coming from Croydon, that doesn't surprise me!

First Amiga Game

Psygonsis, of Liverpool can claim to be the first people to release a game for the Amiga. Brattacus, a conversion from the QL and Atari St is to be released almost immediately, and as such should corner what little market there is!

Why are we waiting

Orpheus win this month's award for the longest wait for an 'imminent release'. The Young Ones was first seen at the PCW show, in demo form, and since then I have been told various reasons for its delay, but surely the post cannot take three weeks? I do hope we see it soon!

Yak Returns

With the Hairy One having gone skiing for a couple of weeks with Tony Crowther I am glad to report that all the gossip about these two programmers is totally unfounded. From what I hear they got on like a proverbial house on fire. Does this mean we'll be getting a Locomotive Llama?? Who knows??

Ear Today!!!

News has arrived to me that a certain games player somewhere in Ludlow has been listening to games too loud, thereby causing a severe case of 'Earache'. I do hope he recovers soon!

Sweden recovers from loss of Abba

A new software company, Greve Graphics, recently wrote to me with news of their game 'Soldier One'. I haven't a clue what it's about as they failed to send any details whatsoever, but they did send

a picture of their chief programmer; Bengt 'the dog' Caroli.

If you saw the picture, his nickname would be self explanatory - hound or what!!!

Raiders Returns

Great news for all who like a good blast is that Star Raiders II, the sequel to the original super-classic, is to be released on the 64 in the not too distant future. My big worry was that they

would have lost the original's brilliance, but much to my relief, having seen the Atari 520st demo, I can assure you that if the 64 version is half as good - it should be totally AWESOME!!!

World Domination?

Not content with being the largest supplier of games software in England, US Gold have now set up an international contract with Ultimate meaning they will manufacture, distribute, and market all of Ultimates future releases.

Although it's a bit sad to see one of the most

renowned English software houses get swallowed up like this, hopefully it will mean that Ultimate start producing decent software again. With Dragon Skulle scheduled for release in January (though who knows when we'll see it?) we ought to find out soon whether the quality has

improved.

As well as Ultimate, US Gold are thought to be signing a contract with Adventure International shortly, which would involve releasing titles under their 'All American Adventures' label.

Rumours of US Gold bid for Cuba are vehemently denied!

Bouncing Bounder

Although I managed to avoid getting it in this issue, due mainly to my total incompetence, Gremlin have recently announced Bounder. The game is totally brilliant, no question. It lacks for nothing - bar a Rob Hubbard soundtrack! The graphics are great and the game is one that is totally irresistible. I promise a full review next month.

Revs Stick

Newest joystick this month is one designed specifically to work with the new game from Firebird, REVS. As such it is an analogue joystick with no self centering. In use it proved very good, as long as you had time enough to get used to it!

For more details contact Meedmore Distribution on 051 521 2202.

That's all for this month, except say that I'll try to get out again next month, it get's really horrible down here sometimes!!!! Bye from 'The Worlds Most Famous Cat' FELIX!

STOP PRESS

The Force will shortly be with us! That's the name of a new game shortly to be released by Mind Games. It was written with the consent - and in fact co-operation of Scotland Yard! See next issue for yet another CCI exclusive.

Narrow Road Between Lands

Hello again Mudders! These last couple of months have been full of arguments, quarrels and rows on MUD, mainly over matters arising from the new Arch-Wizards. Most of them have been of a good hearted nature, with nobody outside those concerned affected, and the disputes settled amiably and peacefully, but there has been the odd exception. Brian the Arch-Wiz has stated quite categorically that if he finds ANY wizards messing around with the mortals, then he will FOD (Finger Of Death, ex-persona. Basically, your persona is permanently wiped out of existence when a wizard does this to you!) them and possibly have them removed from wizard status. I personally think that this is a rather hard line to take, as part of the fun of being a wizard is the ability to torment, tease, and make fun of those mortals who once used to be your 'fellow' players (On reaching wizard rank, most people try to distance themselves from the mortals, and try to develop an aura of 'mystique' and magic about themselves). Several other wizards have also objected to this ruling in no light-hearted manner either! HEhehe.... Kate the Arch-Witch has said that she supports Brian's view. I suppose it is a good rule, so long as it is not applied to every case of teasing and tormenting that mortals complain about, to try to get back at the wizards!

Killer Wiz

There has also been a dispute over a persona who recently achieved wizard rank, Laurmara. Kate maintained that Laurmara was given help in the region of 30,000 points! Bolts of verbal force lashed out between those concerned. Whilst Laurmara was still a mortal, Kate, apparently, came onto the game and kept attempting to kill her off. Other players say that they have had this inflicted upon them, especially Jilly, who reached witch status despite these alleged attacks. I hope that other wizards

are not doing this, because it really puts people off the game.

I have had several complaints sent to me about a wiz - and he shall remain nameless - who has allegedly been coming on as a mortal and killing players off. Please, stop this slightly infantile behaviour. I know that this is acceptable on Essex MUD, where the game is open to all, but on Compunet, which is a commercial system, people who are killed off by wizards who are just feeling malicious at the time rarely return to play the game again, which is obviously a great shame.

Heavy Usage

I mentioned a while back that since the reduction in playing time costs came into play (£1.75/hour), MUD usage shot up. Well, following this, usage dropped for a while, but luckily the approach of the festive season, for those of us who can afford it (dig-dig Zark! Snigger.....), seemed to have revived people and people seem to be logging on more often. Now, every time I log onto MUD, I get swamped with requests from people asking if they can be mentioned in my next column, so here goes.....

HELLO TO: Spindle, Zark, Bridrin (ahhh-no more constant nagging from HIM!), David, Zeon, and anybody else who I have neglected to mention! Just think, no more hassling from people wanting a mention; peace at last.....Hehehe

Over Christmas many of you will have had the message 'Account-User Maximum exceeded-please try again later' (or words to that effect) appear when you are trying to log on. This is due to very heavy usage, because of the holidays. In the reasonably near-future, this message will appear very rarely, as Compunet are all set to execute vast improvements to the system. The code has already been re-written several times, so increasing capacity and speed considerably. So if you are on one night, desperately trying to get somewhere in the game, but can't because of the speed, don't

fret because soon, all will be well.

Rumour has it that MUSE and Level 9, the renowned British s/w adventure house, are collaborating to produce an adventure of Infocomic (not sure about that word...hmmmm!) proportions. This should result in a very high quality game with regard to the prose, and certainly a very good adventure, if this rumour has any substance to it! More on this....possibly....next month.

My pleas have been noticed I see! When I entered Valley a few days after the last article appeared, there were actually a few people playing it! I felt I had to see if they were real or not, and so tried talking to them and lo and behold, they really WERE real. Thank Wizard for that! Hehehe

A 'reputable' magazine recently stated that they had several computer celebrities holding subscriptions to British Telecom's M.U.D., and amongst them, they said, was Old Hairy Yak or Minter to the uninitiated amongst you, he says that he has not even been approached by BT to go into M.U.D. He doesn't really think it's his kind of game.

"I've got less violent things to do with my time", he says, "like finishing Colourspace on the Atari ST and the Amiga". So much for THAT 'fact'!

Can we please have less swearing on MUD? The odd, mild expletive adds flavour to the game, but some people are just going over the top. In future, anybody heard swearing will be FODDED! So beware all you foulmouths out there! Also, a word of advice, don't start shouting or swearing (however mild!) at a wizard. You will place yourself in mortal danger.....

There are a lot of low-level mortals about, but only a couple of really high ranking personas. We won't get many more wizards at this rate! Come on, get a move on!

Well, I'm off now to go MUdding and snoop on a few players! Hehehe catch you next month!

----*Zaphod the Arch-Wizard has just disappeared in a puff of smoke.

"Realistic
Simulation"

REVS

Following the trend they set with *Elite* last year, Firebird have now taken Acornsoft's other mega-game; *Revs*. When I first played *Revs* on the BBC I was astonished by the feeling of reality that it gave.

It seems that at last companies have realised that to sell a new racing car game – when there are already so many on the shelves – it would have to be something really special, and that's exactly what *Revs* is.

If you have played the BBC version of *Revs* you will immediately feel at home with your hands splayed all over the keyboard. I've never really been able to play this game with joysticks, although I hear that

someone is bringing out a joystick purely to work with this game.

It really is amazing the lengths to which Firebird have gone to in order to keep the game's original features – even to the extent of reproducing the BBC's mode7 menus!

The game places you in the driving seat of a Formula 3 racing car. Originally Acornsoft were helped in the designing of the game by David Hunt (younger brother of Shunt), and you must race around Silverstone or Brands Hatch as fast as possible.

Realism is everything in this game, to the extent that you can see cars approaching in the wing mirrors, and more importantly (especially at Brands) you cannot see over the crests of hills!

This is the type of game that really shows the 64 at its best. The graphics are outstanding, the animation smooth, and the effects add to the general atmosphere.

Take my advice; buy the game, practice like hell, then shut the door, dim the lights and as the immortal Doors song says: "Keep yours eyes on the road and your hands upon the wheel"!!!!!!

DEATH WAKE

Arcade-Simulations seem to be all the rage at the moment. I can only presume it's because software houses have realised that people want a little more for their money.

Death Wake, Quicksilver's latest release is not the best game I've

played recently, but it could appeal to some people.

As the captain of the Undaunted, you are your country's last hope for a victory. Using your one main battleship, and two accompanying frigates you must try and battle your way towards the enemies base, and destroy it with one perfectly placed missile.

What makes the game interesting is not the addition of a map to try and make it seem strategic, but the different levels you must complete before you have finished the game. These include travelling in convoy through minefields, shooting down enemy planes, avoiding torpedoes, shooting gunships, as

well as various other mindless blasts.

Graphically, Death Wake is not outstanding, especially when you have to look at it having played Mercenary, and the sound really is uninteresting - with only the most cursory effects. That apart, I quite enjoyed the game!

NAFF

OUTLAWS

I have recently learnt that U.S. Gold have taken over the sales and marketing of all Ultimate's new titles. This is an attempt to let Ultimate get on with programming decent games; and if Outlaws is anything to go by, they sure need it.

Imhotep, Ultimate's last release, was truly dreadful - unfortunately Outlaws isn't much better. Graphically it is obviously Ultimate - big sprites and smooth scrolling backgrounds, but the game has so little gameplay, and is so boringly repetitive that I can see very few people getting much satisfaction out of this one.

Musically too, Outlaws is below par - in a time when Rob Hubbard and Martin Galway produce such amazing music - to the extent that turning off the sound is almost essential.

When you think that this game costs ten pounds, it is amazing that Ultimate have the nerve to release it. Let's hope that now

they have more time, Ultimate go back to their old ways and produce really high quality games - worth waiting for!

Even the horse that you must ride around Indian and Gatlin territory looks as if it's bored with the game. Although they were criticised for being a little lacklustre, the Pendragon series were fab compared to this (come back Arthur, all is forgiven!).

AWESOME

MERCENARY

When you've waited for a game as long as we at the office have waited for *Mercenary*, it comes as a bit of an anti-climax when the game actually comes through the door!

Having actually worked up enough courage to open the packet and load the game I was relieved to see that, even after ten minutes play, this game really is as good as anything I've ever seen – as far as Elitesque wire line (vector) graphics are concerned.

The game is sub-titled; 'Escape from Targ', and in the long run this is really what you want to achieve, but to do this you must acquire enough money, either through the spoils of war, or by taking on missions from the Palyars and Mechanoids.

The game starts by showing your ship crashing into the planet Targ. Although you survive unhurt, your ship is a total write-

off. Luckily for you, Benson – your interface to the world around you, and general helper – the computer, has also lived through the ordeal, and immediately tells you of a replacement ship for sale, for 5000 credits. As you have 9000 credits, this seems like a must!

There are two differing types of play that I found proved to be of value to the aspiring superhero. Firstly, you can play the 'lets blast everything in sight' game, but unless you are quite an experienced pilot, you will find that death is an annoyingly frequent occurrence.

More practically you can spend an awfully long time just exploring various objects and areas for, as well as the huge overland playing area, there are a variety of sub-terranean tunnels which – when you have mastered the elevators – will quickly prove to be of interest.

Graphically *Mercenary* has to

be one of the most impressive games this year. Using true three dimensional graphics, rather than the pseudo type used on games such as *Skyfox*. Although it is not running at an amazingly fast speed, it is still amazing what Paul Woakes has done with the 64. The sound too adds to the game, although no memory has been wasted on pretty theme tunes!

Overall, *Mercenary* is a truly outstanding game, well worthy of all the hype it has and will receive; brilliant! I can't wait for *Mercenary II* (although if the past is anything to go by, I'll have to!!)

BLADE RUNNER

In my view 'Bladerunner' is the best sci-fi film I have ever seen. Although this sounds like a ridiculously sweeping statement, it was not until the third viewing that I really felt I understood all the intricacies of the film and, unlike any other film I can think of, it still keeps me glued to my seat.

When about three months ago I heard that CRL were producing a game loosely based on sections of the film, I became very excited, and rushed over to see a pre-production version.

Unfortunately the game was nowhere near completion and had very little gameplay. When the finished product arrived I eagerly loaded it.

I suppose it was inevitable that the game couldn't live up to the film, but this game really is a

disappointment. Firstly CRL seem to have perfected a Spectrum emulation program, and secondly the game is really repetitive.

Basically you must travel around various 'Sectors' selecting 'Replidroids' which you must then retire. The first map shows you as a diamond and you are helped by a variety of scanners and a link to the police computer.

Once you have picked a replidroid to chase - varying in power from 1-6 - you are shown a

display of a street, and having climbed from your skimmer you must run along the street, dodging cars and innocent bystanders, and retire the replidroid.

The graphics lack colour and you are displayed pretty badly, with Harrison Ford's overcoat looking uncannily like a dress. Musically the game is really nice with a section of the film score well represented, but this does not make up for all the other failings!

CRISP

MASTER OF MAGIC

This game, the third in Mastertronic's MAD (Mastertronic Added Dimension) range, is yet another good value product. If you compare this type of game at £2.99 with Ultimate's latest at £10, you really can see why Outlaws has received such a lot of criticism.

Richard Darling, the programmer behind this game, has realised in time that to create a successful game in 1986 you need to combine talents, and as such he has used Rob Hubbard to do the sound (more later) and James Wilson to create the graphics.

The game places you as a character on the screen (represented by a yellow dot), and you

must move about a maze, which expands in the direction you travel. Along the way you find various objects that will be of value (potions, scrolls etc) and also you confront various evil characters that will do their best to stop you from proceeding any further. To succeed you must use your spells to the full, and collect weapons and other useful items.

Graphically the lower half of the screen is truly excellent, with some really nicely defined characters. The music is, although not his best, a true Rob Hubbard Classic - and can do no harm to his already respected reputation.

Overall this is another good game from M'tronic, and at £2.99 it must be one of the best value games around.

AIR • COMBAT • EMULATOR • • BY CASCADE GAMES •

£10.95
INC. FREE WATCH
AND POSTAGE

1-3 Haywa Crescent Harrogate

THE FASTEST GAME ON TWO WINGS! AND A FREE MULTIFUNCTION CALCULATOR WATCH

The AIR COMBAT EMULATOR, packed with exciting features, is by far the fastest, most realistic flight simulator available. For the first time on a home computer, feel what it is **really** like to fly a high performance military jet and engage tanks, missiles, ships, helicopter gun-ships and two types of cunning intelligent enemy aircraft.

Featuring over 300 sprite images, ACE has the smoothest, most detailed cockpit view of hills, trees and other ground objects ever achieved thanks to specially developed Dynamic Graphic Technique (D.G.T.™) allowing sensational high speed solid 3D graphics.

In combat, your head will spin as you struggle with the help of the advanced avionics which include a rear-view camera and radar, to stay alive long enough to do some damage to the enemy.

The unique two seat flying option (pilot, navigator/weapon man) and **Synchro Speech™** which passes vital aircraft condition information to the flight crew without freezing the action combined with dynamic tactical map, take offs and landings, summer, winter and night-time flying and a remarkably realistic in-flight refuelling option makes ACE the ultimate AIR COMBAT EMULATOR.

ACE SCENARIO

A vast invasion fleet has landed on your southern shores and discharged scores of tanks supported by helicopter gun-ships and protected by mobile surface to air missiles. Squadrons of enemy fighters give the enemy forces air cover. Advancing ruthlessly they are conquering your homeland, facing no opposition.

You are the last fighter pilot with only three A.C.E. Mark 2.1 multi role All Weather All Terrain (A.W.A.T.) combat aircraft. Based at an allied airbase, your task is to attack and destroy the numerically superior enemy land and air forces and drive them from your shores. The final stage of the conflict, having already destroyed the enemy land forces and shot down their air force, is to sink the enemy fleet as it evacuates its defeated army.

ACE - EXPERIENCE IT NOW

Every computer game fan will love ACE - just look at these features:-

- 100% optimized machine code uses all available memory.
- Featuring Dynamic Graphic Techniques (D.G.T.™)
- The smoothest, fastest and most detailed cockpit view of any flight simulation.
- Views of hills, trees, tanks and other ground objects. Aerial combat, ground attack and naval attack.
- **Synchro Speech™** i.e. the speech does not freeze the action.
- Two seat option - fly and fight with the aid of a friend.

- Sensational 3D solid (not boring wireframed) graphics.
- High score saving system.
- A.W.A.T. operation (All Weather All Terrain).

* Note due to memory limitations ACE on the C16 and VIC20 (+8K Ram) do not have any ground objects.

MEGA

YAK'S PROGRESS

Basically this is a compilation tape with eight of Jeff's 'classics' for the 64. Each of the games show Jeff's progression through the quality of ideas as well as execution, and for £9.45 on cassette for the two tapes and notes from the Hippy himself, it has to go down as mega-value for money.

The games included are; AMC, Matrix, Hover Bovver, RMC, Sheep in Space, Megagalactic Llamas

battle at the edge of time and Ancipital. If you're a Minter fan you'll have these games anyway, but if not – and you want to get eight games that between them give endless nights of enjoyment, then this is certainly for you.

Soon Jeff will be starting on a new game for the 64, and if it manages to improve on Batalyx, it should really be worth waiting for – let's just hope he doesn't break his neck on the slopes before it's finished!

Price: £9.45 twin cassette
£11.95 disk

10/10 **PASSED** **100%** **YUK!** **JEFFY** **PATHETIC!**

GREAT **FAB** **AWESOME** **STINKS** **TAIL** **BIG** **ZERO** **SILLY** **BEST** **IS THIS A JOKE!** **DODGY**

NAFF **MEGA** **SICK** **FLOP**

AWESOME – few and far between, but a must!
MEGA – excellent, one of the best games this month
CRISP – very good, a game that we all enjoyed – truly playable
IFFY – good, but should be tried first
DODGY – not one of our favourites, but had some redeeming points
NAFF – pretty bad, not really worth a look
PRE-BASIC – the pits, not worthy of the tape it's on!

VIZAWRITE
PERSONAL WORD PROCESSOR

Classic 128

Professional word-processor users expect their document to be formatted as they type it, into pages... VizaWrite Classic does this, instantly! There's no need for 'output to video' before printing... your document is always displayed exactly as it will be printed. Tabs, indents, centering and text columns are always in view... clearly presented, easily altered!

EDITING & PROOFING...

- Massive 55K text area, with text file linking for unlimited output
- Integrated spell-checker/proofreader with 30,000 word disk dictionary
- Full function calculator, with add, subtract, divide and multiply... directly, or using figures in your text, plus full row-and-column arithmetic
- Copy, move and delete by character, word, sentence, paragraph or page
- "Pull-down" menus for easy control
- Full screen and document scrolling, up to 240 character page width
- Find/replace any character sequence
- Merge from most other word processor files directly into a document, and from ASCII spreadsheet files
- Glossary area, for quick insertion of frequently used phrases to your text

VIZAWRITE

Classic 128

'A creative writer's dream...' VizaWrite review in THE TIMES

VIZAWRITE

Classic 128

'Almost perfection...' VizaWrite review in YOUR COMMODORE

PRINTING...

- Multi-line headers and footers with automatic page numbering
- Multiple and collated print copies
- Simple and selective mail-merge, print labels up to 4 across
- Mail merge can use information from VIZASTAR database files
- Supports Commodore printers, and most parallel or RS232 connected printers including JUKI, STAR, BROTHER, SPINWRITER etc.
- Full proportional space printing with JUKI, BROTHER and other DIABLO-compatible daisy wheel printers, and HP-compatible laser printers
- Built-in proportional space NLQ character fonts for CBM and EPSON dot-matrix printers and compatibles

VIZAWRITE

Classic 128

'I liked VizaWrite Immensely...' review in COMMODORE USER

VizaWrite Classic has every essential professional word-processor feature... bringing document preparation and printing to new levels of perfection. Enormous 55K text area, pull-down menus for ease-of-use, true 'newspaper style' columns, 'near letter quality' dot-matrix printer fonts, true proportional space printing, phrase glossary, full function calculator with row-and-column arithmetic, fully integrated spelling checker... VizaWrite Classic, for fast and reliable document content, excellently presented... an easy-to-use wordprocessor with Classic features!

Evesham Micros THE UTILITY SPECIALISTS

THE NEW GENERATION OF BACKUP METHODS HAS ARRIVED

"Freeze Frame" is the product that '64 owners have been waiting for. At the touch of a switch "Freeze Frame" will take control of your computer and freeze the program in memory, allowing you to **SAVE it to tape or disc**. The uses are endless, but typical applications are:

TAPE TO DISC: Use "Freeze Frame" to freeze a memory resident program and transfer it to disc **regardless of the type of loading technique used**. (Disc save incorporates a fast loading system.)

DISC TO TAPE: Memory resident disc programs can be backed up onto tape. (Saved at turbo speed.)

DISC TO DISC: It is possible to make a self contained back up of disc based programs that will both **load at high speed** and **allow the rest of the disc to be used as normal**.

TAPE TO TAPE: Tape back ups can be made at turbo speed with just one tape deck.

CUSTOMISE PROGRAMS: The process can normally be actuated at **any stage** of a program. If you like putting "POKES" into programs for extra lives etc. you can save a version with these active.

In fact "Freeze Frame" is the **ultimate utility**. It works on the program in memory and allows you to make a back up of that program onto tape or disc. The beauty being that the saved version is fast loading and in the case of disc backups no longer has drive damaging DOS errors. The process is **completely automatic** no knowledge of BASIC or machine language is required, just follow the prompts and the simple instructions for **amazing results**.

"Freeze Frame" is a hardware "device" that plugs into the cartridge port of the '64. It does NOT dump the entire contents of memory into the working program and parameters.

Programs converted run **independently** of the hardware. It is also compatible with the '128' in '64 mode and '1570 disc drive. In tests "Freeze Frame" has proved 100% successful with software tested.

ONLY £39.95

WARNING: Don't be misled by other adverts. If you want to transfer turbo load programs to disc, software only utilities are inadequate. They suffer from a variety of drawbacks including poor success rate, awkward to use, greedy on disc space and overpricing.

ALIGNMENT PROBLEMS?

1541 PHYSICAL EXAM £39.95

IS YOUR 1541 HEALTHY?
OR WOULD ITS PHYSICAL EXAM
LOOK LIKE THIS ONE?

The program includes a digital alignment disc and software which allows you to **accurately check and correct** disc drive alignment. The instruction booklet is **very detailed**. Also includes quiet drive stops to stop that "hammering" thus preventing further problems.

ONLY £39.95

Quickdisc+

FAST LOAD PLUS UTILITY CARTRIDGE

Get a **QUICKDISC+** cartridge plugged into your '64 and your 1541 will really start to perform. So many features per pound (sterling) that you will hardly believe it. Includes the following:

Fast LOAD (four to five times normal speed). Works with majority of protected software. Can be switched in and out from the keyboard.

Fast SAVE at twice normal speed.

Fast Format takes just 20 seconds.

Fast Backup copies an entire disc in four minutes. (Not heavily protected software.)

Fast File Copier for selective fast copying.

Improved DOS commands (DOS 5.1) makes for easy use of the disc drive. e.g. **SURETURN** will load and display a directory without overwriting. **BASIC SHIFT RUN/STOP** will load "0." 8.1 etc. etc. very very useful.

incorporates Centronics Printer software (user port) with **CBM graphics** capability. See "Commodore Connection" for suitable lead.

A RESET switch is fitted. (We have found this to be "unstable", it also preserves the tape buffer.)

NO MEMORY IS USED by this cartridge. It is totally "transparent" and uses special switching techniques.

"128" compatible in '64 mode.

Now the price. No not £49.95, it's **not even half** that much. Can you afford to be without QUICKDISC+?

ONLY £19.95

No extra connections are necessary with QUICKDISC+ and unlike most similar products it is compatible with printers and second drives.

DISC DISECTOR V4.0

Now the **fourth generation** of the countries **leading** disc back up/utility package is available. Various improvements have been incorporated to re-establish "Disc Disector" as the **ultimate weapon**. Of particular importance are the following:

"Evesham Turbo Nibbler" is the **latest version** of the infamous "Evesham Nibbler" now boasting **even more power and speed**. Will now copy even the most highly protected discs in **3-4 minutes**. Handles all the latest types of disc protection **completely automatically**. At the time of going to press this program copied **every disc program** available for testing including the latest in games and business software.

"Dual Driver Nibbler" allows the use of two drives to make **even faster back ups**.

"Nova Transfer" will transfer to disc the latest Nova Load mods necessary.

stage loaders. A very useful utility that is of particular use for the programs that need to load more information as the program progresses.

As well as these important newcomers all the old favourite utilities which have helped earn "Disector" such a large following are included. These include **Menu Maker** (selective), **plus several other useful utilities**.

The whole package is menu driven and has its own fast boot system built in for your convenience. Pays for itself the first day you receive it.

ONLY £29.95

Customers with earlier versions may return them along with a payment of £9.95 to receive V4.0

All programs are CBM 128 and 1570 compatible.

All prices include P&P and VAT. Send cheque, Postal Order of Credit Card No. Credit Card order accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders send price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

Marty turns wimp pa to tough guy, as he and the mad Prof look back to the future.

BACK TO THE FUTURE

— The Film

Think about it — if your parents hadn't met, you wouldn't be here today! The past controls what is happening to you now and what is to come... In "Back To The Future" a boy called Marty gets catapulted back into the past to 1955 and finds that not only is he stuck there for a week, but that if he doesn't make sure that his parents meet and fall in love he won't be born — a big responsibility, huh!

This particular task is made all the more difficult by the fact that his mother as Marty puts it "gets the hots" for him and that his father is a wimp who attracts bullies instead of girls, so he has to fix the past so his own future really will happen! Time — as they say — is of the essence.

As a lover of films like "The Time Machine" and books like Heinlein's "Door Into Summer", "Back To The Future" was a sheer pleasure for me to watch. And the

suspension of disbelief which is necessary for the enjoyment of fantasy, which for so many films has to be very forcibly maintained, was in this film in no way at all an effort, as I quickly got drawn into the fast moving believable plot.

Marty, played by Michael J Fox, put up an excellent performance both polished and extremely energetic, daringly skateboarding everywhere and doing a very good Chuck Berry strut. He was accompanied by an inspired piece of casting of Christopher Lloyd as the zany professor (a familiar face as the crazy mechanic from the television series "Taxi"). Even the music was great, featuring the track by Huey Lewis and the News — "Power of Love".

Back To The Future? If you haven't seen it yet, now is the time. If you've gone already, like me you'll probably want to go back again.

BACK TO THE FUTURE

— The Game

If you enjoyed the film (Yes! Yes!!) and you liked the music (Yes! Yes!) and maybe you're even into skateboarding (Yippee!), then this game could quite well be for you!

Although I have only seen the preview (courtesy of Activision's own Dynamite Dan — Andrew Wright) I can safely say that the game could either be brilliant, or not!!

The object of the game is to get your parents (who aren't yet) together, and stop your mother (who isn't yet) from falling in love with you. You must stop Biff (the bully) from causing you trouble. Finally you must do all this in time to make sure that your two pictures, one of you and one of your family (yup, they aren't yet either!) are completed rather than disappearing.

As Marty McFly you really have got a difficult job on your hands, but to help you various objects are spread around the playing area. These include Love Poems — to help your father (Who isn't — ahh you know!), Cups of Coffee, an Alien suit to scare your Pa into action, and a guitar so you can do your Chuck Berry, impressions.

To accompany the game you have a rendition of Huey Lewis and the News' — The Power of Love, produced for Electric Dreams by Rocksoft.

To finish the game you must complete the pictures and then get back to the converted DeLorean that can take you.....BACK TO THE FUTURE!!! (Good ending eh???)

One thing you can be sure, "Well, it's got a lot of potential".

BACK TO THE FUTURE

Compiled by CCI from leading distributors

The Micro Maestros

Musical genius Rob Hubbard is the second sound programmer to be featured in our music maestro series.

Responsible for Monty on the Run, V8 and Commando, Rob's hits keep coming

Name: Rob Hubbard

Age: 30

How long have you been a freelance music programmer?: "Well I've been doing it since I got my 64 around three years ago, but I've only been successful for about 6-7 months"

Musical Taste: "I try to take notice of almost everything, but I really like Chick Corea, classically I like Ravel"

Who have you done work for?: "I've done work for a variety of companies including Mastertronic, Martech, Gremlin, Elite, Firebird, Alligata, as well as a few others."

What equipment do you use?: "For composing and developing tunes I use a small Polyphonic keyboard, and I write things down on manuscript paper. To actually enter it into the 64 I use my own music program, although this is really little more than a machine code source file"

Do you consider yourself a Musician or a Programmer?: "I'm definitely a musician, I do gigs around the Newcastle area as a musician, computers really come second"

What's the best soundtrack you've done?: "Really it's a toss up between Martech's 'Crazy Comets' and Mastertronic's 'Master of Magic'. I also really like the work I've done for Gerry the Germ goes Bodypopping"

What's your favourite soundtrack apart from your own?: "Really it must be Rambo's loading music, the effects on that are really special, otherwise I really like Activision's Master of the Lamps."

How long does it take to program a soundtrack?: "Generally I'd like to have between two and three weeks to do a track, meaning I can get everything right. On the other hand I did the Commando music in 24 hours solid!"

How much RAM is allocated to your soundtracks?: "Really it depends on what's available. The most I ever had was 5.5K for Monty on the Run, but for Master of Magic I only had 3K, but still it goes on for nearly 6 minutes."

What does the future hold for you?: "That's a really difficult question I'd like to get an Amiga as soon as possible and progress onto doing work on that. Hopefully I'll have one before March."

How many soundtracks have you done?: "I suppose I've done around forty different pieces which were spread over about twenty different games."

I must thank Rob for being so helpful, and I look forward to some of his new releases, especially a couple he mentioned by Firebird. I also cannot wait for him to get hold of an Amiga, that should produce some really special results!
Francis Jago

THE FINAL CARTRIDGE

THE FIRST OUTSIDE OPERATING
SYSTEM FOR THE CBM 64 *

£45

This new operating system built in a cartridge
does not use any memory and is always there.
Compatible with 98% of all programs.

DISK TURBO - 6 times faster loading -
8 times faster saving.

TAPE TURBO - 10 times faster, even
with files - normal Commodore
commands - compatible with standard
turbo's.

**ADVANCED CENTRONICS INTER-
FACE** - compatible with all the well-
known centronics printers and Commo-
dore printer programs. Prints all the
Commodore graphics and control codes
(important for listings).

SCREEN DUMP FACILITIES - of low-
res Hi-res and multicolour screens!!
Prints full page with 12 shades of grey
for multicolour pictures even from games
and programs like Doodle, Koala pad,
Printshop etc. Searches automatically for
the memory-address of the Picture.
Special version available for the CBM
801 and 803 printers.

**24K EXTRA RAM FOR BASIC-
PROGRAMS AVAILABLE:** Two new
commands „Memory read“, „Memory
write“. They move 192 bytes with
machinelanguage-speed anywhere in the
64K Ram of the CBM 64. Can be used
with strings and variables.

BASIC 4.0 COMMANDS - like Dload,
Dsave, Dappend, Catalog, etc.

BASIC TOOLKIT - with Auto, Renum
(incl. Goto and Gosub), Find, Help, Old,
etc.

Original multicolour full page screen
dump print out.

PREPROGRAMMED FUNCTION

KEYS: Run, Load, Save, Catalog, Disk
commands, List (removes all list-
protections).

KEYBOARD EXTRA'S - Allows you to
delete part of a line; stop and continues
listings; move cursor to lower lefthand
corner. Pokes and Syscalls in Hex. Typ-
command operates your printer as a
typewriter.

**COMFORTABLE EXTENDED ML.
MONITOR:** - with relocated load
scrolling up and down. Banksitching,
etc. - does not reside in memory.

RESET SWITCH: - resets to monitor;
resets with old, resets to Hi-res printing;
resets every protected program.

ON/OFF SWITCH - we hope you never
need that one.

FREEZE FRAME

Stops and continues almost
every program and allows you to
make a **total back up** to disk or
tape automatically.

14 Days money
back guarantee
if you are
dissatisfied.

12 Months repla-
cement guarantee.

Diary of an AMIGA

Some of you may recall that fateful day in the summer of 1985 when PCW magazine published an article penned by the redoubtable Guy Kewney about the forthcoming AMIGA-PC from Commodore. We had all heard and read a little about this mighty machine but Kewney's article was the first to give us a relatively detailed insight. The more I read the article the stronger my intention of purchasing one became.

I avidly scanned many magazines including sending off for copies of American imports, pestered many people all in a concerted effort to glean as much information as possible about the AMIGA. By the time the PCW Show came around I had formed the conclusion that if the AMIGA ran as well as it read, it was the machine to buy.

Up until the announcement of the AMIGA, I did have my eyes on the ATARI 520ST; I would imagine that this being much the case with most serious users of home micros. I looked forward to seeing this in the flesh (or should it be plastic?), at the PCW Show. I arrived at Olympia and battled with the crowds, heat and humidity and was dutifully impressed with the ATARI machine. However, since I was lending a hand on someone's stand for the week, rumours that the AMIGA was at the Show began to reach my ever-open ears.

The sources of the rumour seemed impeccable and by the second day I had tracked down the location of the AMIGA demonstrations and formulated a rough plan of how to get past the Commodore guards. All that remained was to carry it out. Faint heart never won a fair lady, or so they say and since my plan was based on 99% bravado and 1% cheek, by the time I had managed to enter the hotel suite where the demonstration was being held, I felt sure that the proportion of these ingredients of my plan had reversed.

Amiga Demonstration

My tenacity was well rewarded; a short video of the launch in New York, a quick talk by Gail Wellington and then with a sleigh of hand worthy of Paul Daniels, off with the covers and there they were. Stifling my natural instinct to race over and start bashing away at the keyboard, I showed incharacteristic restraint and casually sauntered over with the air of a battle-hardened veteran – besides I didn't want to be first to crash the machine! Yes, this was the one for me, the more I saw of AMIGA merely stiffened my resolve to buy one at the earliest opportunity. To the amazement of the others on the stand I stopped sneaking off to haunt the ATARI area and started to bore everyone by extolling the AMIGA and how much better it was than the 520ST.

**"A dream of a computer,"
is how the Amiga has been
described. It was love at
first sight for Bill Donald
and this is his story!**

I hadn't seen much of my wife Janet during the week of the PCW Show and when it was over I mentioned that I had seen the AMIGA. Amid the collective groans from her and the cat I announced that I intended to buy one just as soon as I could. Applying the normal feminine instinct of domestic practicalities she asked "where are you going to put it, the amount of stuff you already have takes ALL of the spare room, you couldn't swing a cat in there.....besides where is the money coming from?" demonstrating further understanding of the more mundane aspects of life in 1985. I quickly shrugged off the objections.

"How much were you thinking of Mr.Donald?" asked the bank manager between sips of Maxwell House and pages of my proposal cunningly enhanced by judicious use of the Koala Pad and Epson RX80 bit-map graphics. Years of training and dedication to the tradition of the banking equivalent of the stiff upper lip enhanced by several successful rounds of verbal and financial jousting with me suddenly slipped like a mask when I tried to make the phrase "Two thousand should be sufficient" sound like a mere bagatelle while maintaining an earnest but serious face at the same time.

He let go of the copy of my current account statement and then opened one of his drawers and for an instant I had a vision of newspaper headlines reading something like 'bank manager shoots customer' or 'bank horrified at managers suicide in front of customer', which quickly passed as he took out a clean tissue and carefully returned my current account statement into its folder and then equally carefully began to dab the red ink from his fingertips. I will draw a veil over the rest of the proceedings. However, later in October he relented and having once more obtained the necessary signature regarding the sale of my life, limb and soul gave me the go-ahead.

Collecting the Amiga

I swiftly conveyed my intentions to Commodore at Corby and indicated that I would like an AMIGA as soon as the funds were made available. I received the distinct

impression that I was not being taken seriously and it was only upon my arrival at Corby on 8 November that they realised that I did actually want one. The scene in the reception was one I will forever relish; on being asked how would I be paying the £1776.33 I replied "cash!". However disaster struck in the form of no monitor. Some foul-up in delivery rates, problems with the Customs and Excise, a points failure at Clapham Junction, you name it, an excuse was forthcoming. They assured me that having taken the money for the monitor an early delivery would take place.

I departed from Corby rather unhappy at this, wondering as I drove back to Kent down the magnificent M11 how to get this one past the wife. "What, you mean you have paid nearly £2,000 and you cannot even use it?" she hissed that evening. My wife can be very hurtful, accurate but hurtful, oblivious to the pained expression on my face. I attempted to divert the issue into the huge amount of reading that would be necessary to understand the AMIGA. Corby had managed to provide several volumes of manuals referring to various parts of the system and they were comprehensive to say the least. She was still not amused!

I had, by now become a victim of my own mouth; a lot of friends had, on previous occasions been bored rigid by my own conversations on this wonder-machine and since the AMIGA had arrived chez Donald, they all trooped around to be suitably impressed. Needless to say, they all trooped back out again singularly unimpressed, "fancy door stop" or "expensive slab of plastic you have there Bill" were some of the kinder remarks passed. Your writer's credibility started to plumb new depths! With increasing difficulty I put on a brave face and continued ploughing through the manuals, if nothing else then at least I had a fair inkling of how to set up and run the AMIGA.

Multitudes of Manuals

Friday 29 November dawned bright and sunny and the post brought forth a receipted parcel from Commodore. My initial reaction was to assume that it was the fabled monitor but the parcel's size indicated otherwise. I quickly opened it and found large quantities of amendments to the existing manuals. This kept me occupied for a few hours until lunchtime was heralded with the growling arrival of a delivery truck.

The thought crossed my mind that probably one of the neighbours has bought another microwave oven thus providing oneupmanship at one of the innumerable Tupperware parties they have around

here; "We've now got TWO microwave ovens Daphne, we keep the new one in the bedroom just in case Rod feels like a midnight snack."

I opened the door to be met with a very, very large box marked with the magic word 'monitor'. Resisting the temptation to open it there and then on the doorstep, I signed the note proffered at me by the Geoff Capes clone and rushed upstairs with the box to my inner sanctum. The moment of truth had arrived and I felt the ghosts of my wife, bank manager and friends looking over my shoulder all chortling with glee that it wasn't going to work. In the event it did and the welcoming image of a hand clutching a disk marked 'KICKSTART' caused me to issue a sigh of relief that must have been heard around most of Kent.

The Package

Before I go any further it would be as well to let you know just what I have received in exchange for the money. The standard machine comes with 256k RAM, internal 880k 3.5" disk drive, high resolution colour RGBA monitor, introductory literature, system disks and a version of Microsoft BASIC tailored to the AMIGA.

The AMIGA which I have is an enhanced configuration aimed at software developers. My machine has the plug-in RAM pack which gives it 512k RAM, an additional drive which is an external 880k 3.5" giving a total storage of 1.76MBytes, a full set of system documentation, various disks containing a 68000 assembler and monitor, a C language compiler, a BASIC interpreter (in this case by Metacomco), and some demonstration programs.

The documentation consists of the following:-

1. Introduction to AMIGA
2. Lattice C Compiler Manual
3. AMIGA DOS Technical Reference Manual
4. AMIGA DOS Developers Manual
5. AMIGA DOS Users Manual
6. AMIGA Hardware Manual
7. AMIGA ROM Kernel Manual
8. Intuition Manual

As you can see it is a step up from the C64 Programmers Reference Guide for both myself and Commodore; the volume of number of pages runs into the thousands rather than hundreds and this is STILL early days! It was because of this daunting weight of material on AMIGA that Commodore Electronics Ltd, (the parent company for the Western Europe Commodore companies) hereafter referred to as CEL, decided on the need for a conference to familiarise software houses and professional programmers with the facilities of the AMIGA.

The Conference

This was held at Eastbourne in early December 1985 and although at the time when I collected my AMIGA from Corby I had ignored the requests that it would be a good idea to attend this conference, a week later I soon realised that it would be VITAL, if I was to start writing about how

the AMIGA works.

The imposing Victorian edifice of the Grand Hotel served as the backdrop to the conference and my initial impression was surprise at the large number of attendees and even more remarkable was the proportion of French, German, and Dutch – virtually every nation in Europe had someone there.

The conference started on Monday 2 December although there had been a 'welcome' buffet the previous evening. This gave me a chance to look for faces that I knew in the crowd. Thankfully, there were a few and the fact quickly emerged that not very many actually had an AMIGA. Those who didn't were largely sceptical of the machine, but those who did have one developed enthusiastic conversations and I was soon comparing notes.

One of the prime features of the Eastbourne conference was the introduction of some of the team responsible for the AMIGA. In time most of these names will become familiar to you and I suppose it gave them a welcome break from the Californian sunshine to be met with three solid days of British rain! We were issued with yet more documentation and using slide shows, demonstrations, question and answer sessions we were led through the full maze of the AMIGA. It was at times, pretty heavy going and the proceedings served to throw up yet more questions than answers. Anyone who has ever attended a training course, seminar or conference like this will know that the REAL benefits arise during the evening social functions and Eastbourne proved no exception to this. One of the attractions lay in the number of AMIGA's that Commodore had left up and running in one of the lounges. This meant that if you didn't feel like conversation you could try and capture an AMIGA and attempt to impress those who didn't know how to operate it!

One or two highlights of the conference that spring to mind were the demonstration of De-Luxe Paint by Tim Mott of Electronics Arts. This brought a new dimension to the meaning of high – resolution graphics on a personal computer. The other was a simple program showing the text-to-speech facility and I remember the delight of Commodore's John Collins as some french

words were keyed in and from out of the monitor speaker can "Bonjour Monsieur Collins, comment allez vous". All the more amazing when I learned that this program was written in BASIC!

Sceptics converted

By now of course, the sceptics had been well and truly converted and most of them made clear their intention of purchasing an AMIGA as soon as possible. In fact all of the machines that were in use at the Grand Hotel were bought and taken away at the end of the conference!

Eastbourne was exhausting mentally and physically. My evening activity of having long and involved conversations in the lounges quite oblivious to the clock had started to take its toll, one memorable evening running through until 4.0 a.m. and by Wednesday I was all in.

I returned home to be a great deal more wiser about what the AMIGA could do and more importantly, how this could be done on my own machine. So far it has proved to be worth every penny I have paid for it and I have not regretted a minute of it. If there is one complaint it is the retail price of the double-sided 3.5" disks, circa £3.50 each, a far cry from the sub-£1.00 price we pay for 5.25" disks. I suppose as the smaller disk achieves more sales volume then the price will come down, but it hurts paying over £30 for a box of disks.

Whilst on the subject of money, I have been asked many times the question of the cost of the AMIGA. My own feelings on the matter are this; once you have actually seen or even better, used the AMIGA then the whole question of costs starts to dissolve in the sea of machine power. The Atari slogan of 'power without the price' paradoxically can be well applied to the AMIGA. We are still novices to the strengths inherent in the use of multi-tasking, to sound that makes the 6582 SID circuit take on the quality of a semi-strangled turkey, to graphics that are more often seen on dedicated CAD machines costing tens of thousands. AMIGA has power that subjugates price.

I'm just rubbing my hands over the prospect of AMIGA II already. Try to imagine a 68020 processor, internal 50 MByte hard disk, an output port spec as long as your arm, 2 MByte RAM; I must stop this day-dreaming or am I?

Insights Into the Plus/4

Part II

Bill Donald provides further fascinating insights into the Plus/4, looking at second processors and networking.

In the previous article on the PLUS/4 (see January 1986 issue of CCI) we looked at the PLUS/4 hardware. In this article I want to examine further the internal routines and then move onto more esoteric topics such as second processors and networking employing the User Port. I hope that you find this of interest and value, particularly if you own a PLUS/4.

The bank switching of the PLUS/4 can be difficult to grasp because of the number of variations that are possible. The operating system compensates for this a little by the inclusion of three routines termed LONG FETCH (LNGFET), LONG JUMP (LNGJMP) and SERVICE INTERRUPT (LNGIRQ). These are located within the KERNAL address space and are available in whatever combination of banks you have selected.

Taking the first routine LNGFET, this can be found at address \$FCF7 (64759) and its function is to transfer a byte from one bank to another. Applications for this could be storage and retrieval of high-resolution graphics data or array variables separate from those designated by the BASIC interpreter. LNGFET runs quite quickly and the speed could be improved by taking the main processor into fast mode which entails disabling the video output. There are faster algorithms available, but in the interest of program compatibility within Commodore 8-bit machines you would be well advised to stick with KERNAL routines. LNGFET works as follows:-

1. Disable machine interrupts.
2. Load accumulator with lo-byte of start address, go to step 3 and return, repeat with hi-byte of start address.
3. Store at \$BE (FETPTR-lo) and \$BF (FETPTR-hi) the destination in lo-hi order
4. Load accumulator with present bank selected (see previous article for details of this technique)
5. Load X register with destination bank combination.
6. Load Y register with offset derived by subtracting from base of selected bank to actual address selected.
7. Call LONG FETCH
8. Selected byte deposited into accumulator
9. Do what you like with it!

The structure of assembly language listing would look like this if you wanted to transfer a byte located at address \$80AB from External Bank 2 whilst the PLUS/4 is configured as at power-up:-

```
SEI ; disable interrupts
LDA £$17 ; lo address
STA $00BE ; FETPTR lo-byte
LDA £$90 ; hi address
STA $00BF ; FETPTR hi-byte
LDA £$00 ; standard configuration -
KERNAL and BASIC enabled.
LDX £$03 ; external 2 LOW with KERNAL
enabled, BASIC disabled.
LDY £$AB ; i.e. $80AB - $8000 = $AB
JSR $FCF7 ; call LNGFET
STA $0C00 ; put the byte into the top left
corner of the screen. Don't forget to re-
enable the interrupts if necessary.
```

LONG JUMP, the second of the KERNAL routines is located at address \$FCFA (64762). This is a very powerful and versatile function with unlimited possibilities, however, it does need to be used with care. The purpose of LONG JUMP is to execute a section of code located in another bank. I feel it would be presumptuous of me to describe any uses for a routine like this since I am assuming that most readers who have stayed the course this far are not beginners where machine code work is concerned. For those of you who are particularly creative programmers I would suggest that you explore the area of input/output. LONG JUMP works as follows:-

1. Load the accumulator with present bank selected.
2. Load the X register with destination bank selected.
3. Store the address where the routine is located in lo-byte and hi-byte order in

LNGJMP vectors located at \$05F0 and \$05F1 respectively.

4. Store in FETARG (\$05F2) the value that you want to be available in the accumulator after you have called LONG JUMP.

5. Store in FETXRG (\$05F3) the X register value after the routine entry time.

6. Store in FETSRG (\$05F4) the status register value on return from the routine

7. Call the routine LONG JUMP.

8. Look into your accumulator, X register and Status register for the preserved values you specified.

Note how the routine uses vectors located in Page 1 rather than in Page 0, presumably because of shortage of space. This does build into the routine a certain amount of delay overhead and the Y register unfortunately is not preserved, so do not use this for anything important during the use of LONG JUMP. Here is a specimen assembly language listing which executes a routine located at \$C2FF External Bank 1 with the PLUS/4 in normal power-up mode:-

```
LDA £$00 ; present bank configuration
(see Part 1 of this series in January 1986
CCI)
LDX £$01 ; external bank 1 select
procedure
LDY £$FF ; lo byte of routine location
address
STY $05F0 ; put it into LNGJMP lo byte
vector
LDY £$C2 ; hi byte of routine location
address (i.e. $C2FF)
STY $05F1 ; put this into LNGJMP hi byte
vector
STA $05F2 ; preserve the present bank
configuration
STX $05F3 ; preserve the selected bank
variable
STA $05F4 ; preserve the status register
JSR $FCFA ; call LONG JUMP
```

SERVICE INTERRUPT is really a utility routine and covers the need to attend to an interrupt when you engaged in external banks 1 and 2. LNGIRQ is located at \$FCFD (64765) and re-enables the BASIC/KERNAL bank or power-up configuration when an interrupt occurs in order to

service the interrupt. Program control is then passed back to wherever the code was interrupted. LNGIRQ is operated like this:-

1. Save the accumulator onto the stack.
2. Do the same to the X register, to preserve it.
3. Put the current bank combination into the accumulator.
4. Call the routine LNGIRQ.

I have included below a listing below for those who need it.

PHA ; push accumulator onto the stack
TXA ; transfer X register contents to the accumulator

PHA ; push that onto the stack
LDA £\$XX ; save the bank number select of the present bank you are operating in
JMP \$FCFD ; see to the interrupt

The above listings are meant purely for demonstrations of techniques, they are not designed for optimum use of memory and speed. There are two other banking routines in the KERNAL, one of which is of some interest, namely the PHOENIX which is located at \$FCF4 (64756). This is for an autoboot of the internal ROM, in other words call this if you want to enable the 3+1 software of the PLUS/4.

It's now time to move theoretical side of interfacing to the PLUS/4. There is very little published information on the hardware of this machine (one of the main reasons why this series came about) and I have to admit that shortage of time and a heavy involvement with my AMIGA since November 1985 has precluded any direct experimentation on my part. There are two elements of interfacing the PLUS/4 that take my personal interest, the first being second processors and the second being networking.

At the home computer level second processors seem to be coming back into fashion. The BBC micro is the one that springs to mind and users have a choice of either a 6502 or the Z80. Commodore did experiment with a second processor option on the C64, albeit not too successfully from a reliability standpoint, whereas the SuperPET with its 6809 option was successfully implemented. The C128 reinforces the popularity of second processors and carries aboard the ubiquitous Z80 for running CP/M. So what is the attraction of second processors and what are they?

A second processor gives the programmer two very useful features; the first being the ability to increase the RAM

size without the complications of bank-switching, the second being the opportunity of using a different processor within the same machine and if need be a different operating system. Taking the first point of increasing the address space, an 8-bit processor can only 'see' 64k of RAM however, if you 'daisychain' processors together then each processor can share the same 64k of RAM or have their own 64k of RAM. The drawback to sharing RAM means that you are effectively bank switching in blocks of 64k, whereas separate RAM allows multi-tasking. For instance some processors are arguably better at maths routines than others, so designating maths routines to this processor whilst the native processor carries on at what it is best at can be done. Similarly, it is possible to have the second processor running at a higher clock speed so a 'turbocharger' concept is possible. The versatility offered by a second processor as a 'bolt-on goodie' is really only limited by your knowledge of microcomputer hardware particularly in view of the fact that 8-bit processors now cost less than £5.00. The second feature of different operating systems is well illustrated by CP/M on the C128.

Current knowledge of the PLUS/4 hardware suggests that if a second processor on a shared \$FF00 to \$FF1F and seemingly cannot be switched out of the address space irrespective of machine configuration. The problem can be overcome in two ways, do not use shared RAM or write your program in such a manner that it avoids laying code into this address space. For instance, to install CP/M on the PLUS/4 using the C64 Z80 card would entail study of the expansion port diagram published in my previous article, building a male to female jumper connector to link the 44 pin card to the 50 pin port, then modifying the C64 CP/M BIOS and CCP programs. Anyone who gets as far as this must surely qualify for the 'Hacker-of-the-Year-Award' and should question really why they still messing around on home computers, I'm sure a job would be instantly available at one of the manufacturers! It is obviously beyond the scope of a magazine article to provide an in-depth discussion of second processors, however, I hope that I have stimulated

some ideas within some readers.

Networking is a much hackneyed word within the computer industry and I make no apologies for providing my own interpretation of the word within the context of the PLUS/4. At a basic level and from personal experience of my own equipment my PLUS/4 and C64 share peripherals such as the 1541 drive. Occasional hang-ups do happen and provide I do not access the serial bus from both machines simultaneously, I have run the PLUS/4 version of SUPERBASE, on one 1541 daisy-chained to another 1541, which in turn is running SUPERScript on my C64. The two machines seem quite happy to share the bus and although it is detachable which machine, the PLUS/4 or C64, is in actual control of bus, it would seem that on power-up the C64 acts as initial controller since it will run the 1541 immediately, whereas the PLUS/4 prefers to go second and goes into a temporary sulk if asked first! I will refrain from describing any possibilities utilising this feature since I'm sure that you could well create your own.

The PLUS/4 supports RS232 more effectively than the C64 or VIC-20 and provides more features to the programmer. To fully implement RS232 you would have to provide a board with 1488/1489 line drivers to take the voltage up from 5.0 to 12.0, the true RS232 voltage level. This only becomes necessary if you were linking to another machine such as the BBC, the other Commodore home machines operate on the 5.0 volt TTL range. The reason why the PLUS/4 is much better than the earlier machines in terms of RS232 is because it does have a 6551 ACIA circuit. The C64 and VIC-20 emulates the 6551 ACIA by means of software within the KERNAL and the tradeoff for this being a maximum of 2400 baud transmit/receive rate whereas the PLUS/4 can run at a respectable maximum of 19,200 baud. In fact this was one of the main reasons why I purchased the PLUS/4.

I feel that the true latent strength of the PLUS/4 lies within the machine itself. The on-board ROM software is the key to this strength; no, I'm not impressed with 3+1 and what I intend to do is to remove this "!!!!?" and dispatch it to the nearest dustbin. Then using thenow very reasonably priced EPROM blowers create a variety of ROM's containing for example, fig-FORTH or dare I say it COMAL (I hope that Brian Grainger, the ICPUG guru on matters COMAL is not reading this!) The whole principle is really identical to the sideways ROM idea as used on the BBC in the sense of user-installed ROM's. I hope that this has not proved too overwhelming to non-technical readers and made all those who don't own a PLUS/4 think very hard about buying one. Street prices now make this one of the cheapest entries into Commodore home computing and for existing owners there's a little ego-tripping on saying you now have TWO machines.

C16 and Plus/4: Your questions answered

Dear Editor,

I am one of those many thousands of people who, after purchasing a Commodore Plus/4 computer am having difficulty locating software, dealers, etc.

I would be grateful if you could give me any advice or information you may have regarding the purchase of such elusive material.

**Peter Hope,
Stretford,
Manchester.**

We are currently putting together a list of software and peripherals for the C16 and Plus/4 which we hope to publish in the next issue.

In the meantime, you may like to contact Venturegate who are now offering a special service to C16 and Plus/4 owners. A selection of 125 programs are available on a mail order basis. Venturegate are planning a software club offering discounts and software lists updated on a quarterly basis.

*For more details contact:
Venturegate Ltd.,
17 Harold Road,
Leeds 6 IPR.
Tel: 0532 661 834*

Dear Editor,

Please could you tell me whether there are any printer interfaces available for the Plus/4?

**Ian Nichols,
S London.**

FCC offer four interfaces compatible with the Plus/4 and C16, ranging in price from 47.50 to 64.99. For more information contact:

*FCC Systems Ltd.,
The Lodge,
Moorlands Road,
Merriott,
Somerset TA16 5NF.
Tel: 0460 73442*

CCI has been inundated by enquiries from C16 and Plus/4 owners since Christmas. This month we devote our Queries page to them.

Dear Editor,

Is there a Rampak for the C16 to increase memory, and will I then be able to run 64 software on the C16?

**Colin Williamson,
St Helens,
Merseyside.**

The answer to the first half of your question is yes. MCT have 64K Ramboard for the C16, costing 49.95. This is fitted internally and automatically provides access to 60671 bytes free to Basic. However, this DOES NOT mean that software written for the 64 can now be run on the C16.

MCT can be contacted on 0603 633005.

Dear Editor,

I write to you as the proud owner of a Plus/4. Proud because I think it is probably the best value for money available especially with the 1551 disk drive and MPS 803 printer.

I'm not entirely happy with the dearth of software and peripherals, but I believe a lot of this is due to negative attitudes in the trade and I hope that the good sales over Christmas may improve this.

I would like to ask if there is a modem suitable for Prestel for the Plus/4?

**Peter Healy,
High Wycombe,
Bucks.**

I'm sorry to say that we were unable to trace a modem compatible with the Plus/4. However I would like to take this opportunity to make a plea to all manufacturers to send us details of all C16 and Plus/4 products for inclusion in our lists.

Dear Editor,

Can you tell me why there is so little attention paid (by software houses – even Commodore itself) to the Plus/4 and the form of Basic it uses (Basic 3.5)?

Why has Commodore withdrawn, or never published, the 'Plus/4 Programmers Reference Guide'?

**John Marsh,
Guildford,
Surrey.**

Firstly, companies we have spoken to are now aware that there is a substantial demand for Plus/4 products and we can only hope that this will generate the production of further products.

With regards to the existence of a reference guide, Commodore never published the equivalent of the Programmers Reference Guide series for the C16 or Plus/4. What they did do was to put together a photo-copied guide of around 120 pages called the C16 and Plus/4 Programmers Guide.

The review of this guide published in CCI November 1985 reached the conclusion that it wasn't worth the £9 Commodore were asking for it.

If you are interested, it is available only from Commodore at:

*Commodore (UK) Ltd.,
1 Hunters Lane,
Weldon,
Corby,
N Hants NN17 1QX
Tel: 0536 205555.*

Do you have a computing problem, or advice to offer other readers? Write to us at:

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

Boxed, with detailed instruction booklet

FIXGEN 85/6

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER v3 THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM. Coursewinner V3 can be used by experts and occasional punters alike.

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

SUPER GRAPHIX

PRINTER
INTERFACES

FOR COMMODORE 64 AND VIC 20 MICROCOMPUTERS
UNLIKE ANY OTHER PRINTER INTERFACES ON THE MARKET THESE AMAZING
PRODUCTS CONVERT STANDARD DOT MATRIX PRINTERS TO NEAR LETTER QUALITY!

CHECK THE OTHER FEATURES BELOW!

SUPER GRAPHIX jnr

- ☐ MICRO BUFFER
- ☐ GRAPHICS & NORMAL QUALITY PRINT
- ☐ NEAR LETTER QUALITY
- ☐ 8 OCTAVE SWITCHES WITH CHANGES CONSTANTLY MONITORED
- ☐ COMMAND CHANNEL
- ☐ 10 PRINTER MODES
- ☐ CENTRONICS COMPATIBLE
- ☐ SUPPORT MOST MAJOR PRINTERS
- ☐ 100% COMPATIBLE WITH SOFTWARE FOR VIC 1525 PRINTER
- ☐ USER MANUAL & SOFTWARE EXAMPLES

PRICE £49.95 (inc. VAT) Post & Packing FREE

SUPER GRAPHIX

- ☐ 8 K BUFFER STANDARD
- ☐ 10 PRINTER MODES
- ☐ 3 INTERNAL SCREEN DUMPS
- ☐ EXTENSIVE COMMAND CHANNEL
- ☐ RESET BUTTON TO HALT PRINTING FROM BUFFER
- ☐ NEAR LETTER QUALITY MODE BUILT IN
- ☐ CAPABLE OF STORING 2 ADDITIONAL FONTS
- ☐ CORRECT GRAPHICS / TEST ASPECT RATIO FOR ALL MAJOR PRINTERS

C16 — Pick of the Bunch

Believe it or not, there are over one hundred games titles for the C16. (Don't forget you can also run C16 software on the Plus/4, but not vice versa.) Conversions have been made of popular games and many C16 owners will welcome the news that US Gold have converted its mega-hit Beach Head. There are also original games written for the C16. Something for everyone, from maze games to simulators.

We start this selection of games in a maze, trying to avoid the dreaded Zobwats! They are the guardians of the maze in which the dismantled parts of your crashed transporter craft have been hidden by the inhabitants of a strange planet. The game is *Dork's Dilemma*, by Gremlin Graphics. You are Dork and you must collect and reassemble the parts of your craft.

We continue with mazes for the next three titles. *Mastertronic's Rockman* places you in a diamond mine attempting to collect enough sparklers to enable you to return to England rich and famous. Greed is a funny thing, and strangely enough there are lots of baddies about trying to steal the diamonds you have worked so hard to find.

We remain underground with *Cave Fighter* from *Bubble Bus*. Trapped in an underground cave system, your energy is running

"What games are there for the C16?", is a cry we have heard many times over the last month. Well, we've put together a selection of C16 games to tempt you.

out. There are many aliens to zap as you try to escape by travelling through all the caves before your energy finally runs out.

Bigger, from Alligata, is a conversion of a popular 64 title. As master burglar, Roger the Dodger, you rob safe after safe always on the look out for ghoulish nightwatchmen.

If you want some good old 'shoot at anything that moves' fun, look at *Space Escort* from Atlantis. Your planet is doomed, and you are escorting space liners carrying your people to the newly conquered world of Sistoria. Just when you thought it was safe to go back into space, wave after wave of alien attackers set out to blast you out of the universe.

Spectipede, from *Mastertronic*, is for those who are selective about just who they blast to pieces, but not for those who are

frightened of creepy crawlies. You must destroy the Spectipede one segment at a time, while looking out for spiders and the enemy ship.

Feeling fruity? Try playing *Mastertronic's Tutti Frutti*. As super strawberry, King of the Orchard, (eh!) you must collect all the ripe cherries. Beware the bad apples and the acid apple gang.

Mastertronic's Big Mac, The Maintenance Man, is not about hamburgers! Mac is a scret agent with a mission — to boldly go where no Big Mac has gone before and achieve a complete shut down of the enemy power station.

We will round up this selection with three simulations. *Death Race 16*, from Atlantis, gives you 80 seconds in which to overtake the 70 cars that left you stalled on the starting grid. Instant death results from the slightest mistake.

Formula 1 Simulator, from *Mastertronic*, is very realistically based on Formula One levels of acceleration, braking and road holding.

Finally, you have been entered for the *Mastertronic Gold Cup* in *BMX Racers*. There are five courses to undertake and in addition to avoiding hazardous obstacles, you must pick up all marker flags on the way. If you don't, you crash at the finish!

BASIC

for beginnerz

I hope that by now you are starting to become quite familiar with your C16, C64, Plus/4 or C128 and after reading the last installment of the series you are all rareing to go. Before we do, I asked that you became familiar with the SAVING and LOADING of programs. You have probably learned just what the word frustration means that when having spent large amounts of time entering in program listings from books or magazines you forget to SAVE the program, or alternatively RUN it just to see the results with a resultant machine 'crash'. Even worse still, accidentally NEWing it. Yes, you don't have to tell me about that sinking feeling in the pit of the stomach! Moral: don't be afraid of storing the program on tape or disk. I feel a lot of the reluctance to do this stems from a fear of running out of storage space, think of it like this, YOUR TIME is very much more expensive than a £2.00 disk or £0.50 cassette tape.

Computer jargon

One of the biggest problems in computers is coming to terms with the jargon used. It is difficult enough learning how to use the things, let alone looking at and trying to understand what MID\$ or ASC means in real life.. At this point I going to have to make an apology for throwing yet another new word at you, a word which is rarely seen or used when discussing computer programming at a beginners level and yet is of such fundamental importance the failure to understand and apply the concepts embodied in this word really make it impossible for you to grasp what computer programming is all about. This word is ALGORITHM. No, it isn't some obscure japanese medieval dance or a method of birth control practised in 19th century Siberia but a description of a process.

For instance, suppose you wanted to brew some beer at home. Assuming of course that you have the ingredients to hand, the instructions or sequence of events or process of manufacture to do this can be detailed as follows:-

1. Boil malt for 2 hours.
2. Simmer hops with resulting liquor for 30 minutes.
3. Dilute with cold water.

PART II

Bill Donald leads you further along the path of programming in the second installment of our guide to basic programming.

4. Add yeast to liquor.
5. Allow to stand and ferment for 14 dsays.
6. Transfer liquor to storage containers.
7. Invite Bill Donald around and consume beer.

If any of the above steps are rearranged then the end-result will not be achieved, not least because I'll be pretty unhappy at being involved with washing-up but there is no way that drinkable beer will be produced. So as you can see for some processes a very clearly defined sequence of steps is necessary. This is an algorithm for producing beer.

Your Commodore computer can only understand very clear, unambiguous instructions and in order for us to produce these instructions in a notation that the machine understands, a computer program or sequence of statements is defined using an algorithm. The programming language selected to communicate can be any one of those languages discussed in the last part of this series, but in this case it will be in BASIC. You can think of an algorithm in whatever terms suits you best, for instance a recipe, an instruction sheet, a flow diagram. But remember that this is only the 'bones' of your computer program, to put 'flesh' on these bones and turn it into a living thing requires a computer language.

So, having drawn up your algorithm you then start to convert it into Commodore BASIC. To make things simpler, especially when a large number of steps are involved

which demand an answer to a yes/no or positive/negative it is usual to draw a program flow chart. The stencils for these can be obtained from branches of Menzies or W.H.Smith very cheaply and I would urge everyone reading this series to buy one AND START USING THEM. The symbols on them are standardised and despite my own initial scepticism these stencils are very, very useful tools to learning. There is an old adage in computers which goes something like this, 99% of would-be programmers think they can sit down and start entering from the keyboard a workable program from scratch whilst the other 1% sit down and plan the program, in reality these figures are reversed.

The art of programming

Learning to program computers means, in most peoples minds, wrestling with the intricacies of, for example BASIC. I hope the above has convinced you otherwise and the REAL art of programming is the defining and draughting of the correct algorithm. OK, lets try putting this into action.

Suppose that I want to display a numeric value on the screen and then add to this value a preset amount, again displaying this on the screen. I also want the computer to stop exactly when this value has been added to or incremented by another preset number of times. It sounds really complicated, but it isn't. Construct the algorithm like this:-

1. Clear the screen
2. Select the initial numeric value
3. Type this value into the computer
4. Display this value
5. Add to this value the present amount
6. Count how many times we have done this
7. Is it more than specified number of times? YES then stop No then keep counting

Now convert this into BASIC:-

```
10 PRINT CHR$(147)
20 X = 1
30 PRINT X
```

... the Commodore Diary

C.C.I. can offer you the **Commodore Reference Diary**,
compiled by Jim Butterfield for Pitman

Publishing – the greatest expert on Commodore computing – at an exclusive 20% discount on the recommended retail price. The Diary contains a wealth of information and tips on all aspects of Commodore machines, plus everything you need in a pocket size diary.

[illegible]

```

40 X = X + 1
50 FOR C = 1 TO 20
60 NEXT C
70 GOTO 20

```

When you start to compare lines of the algorithm with the program, it should start to make sense.

```

10 PRINT CHR$(147) : 1.
Clear the screen
20 X = 1 : 2. Select the
initial numeric value : 3.
Type this value into the
computer
30 PRINT X : 4. Display this
value
40 X = X + 1 : 5. Add to this
value the preset amount
50 FOR C = 1 TO 22 : 6.
Count how many times we
have done this
60 NEXT C : 7. Is it more
than the specified number
of times? YES then stop
70 GOTO 20 : 7. Is it more
than the specified number
of times? NO then keep
counting.

```

You'll notice that line 20 has two parts to it, I have instructed the machine to use 'X' as the initial value. The reason for this is to stop the machine getting confused with the various numbers that are floating around within the program. These numbers are termed VARIABLES and by attaching letters to these numbers the machine is able to keep track of them, so in this case I have selected the letter X to serve as the initial numeric value VARIABLE. We'll be learning a great deal more about variables, as there are different types and how very important they are to programming. It is essential that you understand what a variable is, so if you are unsure then re-read the above again.

You should, by now see what the function of an algorithm is and how much easier it is to develop a structure to your program, in other words design the program to do exactly what it is required to do. If you develop this approach then the debugging, or unravelling of mistakes becomes much simpler.

What are variables?

Lets go back to this business of VARIABLES and what they are. You will have appreciated from the above program that at any given point within the program the machine has quantities of numbers churning around inside of it. By defining a letter to an initial value of a number I have made what is called in BASIC a NUMERIC

variable. Commodore BASIC can support more than the 26 letters of the alphabet for NUMERIC VARIABLES and you can define these to a depth of 2. This means I could have used 'AB' or 'CD' or 'EF' or even 'A1', 'X4' or 'K9' instead of plain 'X' in the program. There are restrictions on certain combinations of letters depending on which machine you have. For instance, the variable 'TI' is used by the computer to keep track of a numeric variable that has to be included in all programs, even if you do not define it yourself, this variable is time. Similarly the variable 'ST' which is short for STATUS is another variable, and this combination of letters should not be taken as a user numeric variable unless you are aware of the effect.

Numeric variables can subdivided into two, integer and floating-point. The variables I was using in the program were floating-point which meant that they could have a value ranging from 0 to 10 followed by 38 noughts and be either negative or positive. Integer variables are whole numbers, no decimal points and have a smaller range, which in Commodore 8-bit machines run from -32767 to 32768, which is 65535, the number of bytes that make up the memory of the machine (except the C128 which has 2 blocks of 64K but can only use 1 block at a time). Obviously depending on what you want the program to do depends on the type of numeric variable you would use. For instance, a program or section of a program that was very dependant on accuracy of the figures involved would use floating-point variables. If that is the case, why have two different types? Simply because what you make up for in accuracy in floating point variables, you pay for by using up more memory than employing integer variables. Your machine can recognise which type you have selected by appending the percent '%' to the end of the variable. So in our program changing the 'X' to 'X%' would be worthwhile since we are only going from 1 to 22. To see just how much the difference is on your memory using these variables try changing the size of the counter from 22 to 2000 and the variables from floating-point to integer and then, in direct mode i.e. enter straight from the keyboard the command 'PRINT FRE(0)'.

The third type of variable used in BASIC is termed a string variable and this can be recognised from an integer variable because it uses the dollar '\$' suffice. A string variable uses any characters that can entered from the keyboard for display, e.g. letters or graphic symbols as well as numbers. Try the following program which is self-explanatory:-

```

10 A$ = "VAT"
20 B$ = "69"
30 C$ = "IS"
40 D$ = "A"
50 E$ = "GOOD"

```

```

60 F$ = "WHISKEY"
70 G$ = "TAX"
80 H$ = "ON"
90 PRINT A$ + B$ + C$ +
D$ + E$ + F$
100 PRINT A$: B$: C$:
D$: E$: F$
110 PRINT A$, B$, C$,
D$, E$, F$
120 PRINT C$, A$, D$, E$,
G$, H$, A$, B$, F$, "?"

```

You should see the effect of using the plus sign on string variables, and the answer is no I'm not a great whiskey drinker! Notice that if you define a number as a string variable, the machine treats it purely as a character and will not perform any mathematical manipulations on it. This brings us nicely to some other string functions RIGHT\$, LEFT\$ and MID\$.

String cleavers

Most people think that a computer is only any good with figures, but as you will see it is just as versatile with letters, or strings of letters which have been bound up in packages of string variables. MID\$, RIGHT\$ and LEFT\$ can really be thought of as string cleavers, they can very precisely cut the string into chunks. They should by now make some sense to you; MID\$ takes the centre portion, RIGHT\$ takes the right-hand end whilst LEFT\$ takes the left-hand side of the string. You can have a lot of fun chopping up string variables using these functions and then rejoining them in freshly named strings to create all sorts of messages within your programs. The exact method of using these functions is well covered in your USER MANUAL and I would suggest that you use the above program to experiment on.

You will notice that I have concentrated on explanations of BASIC rather than providing listings of programs which may look pretty but don't really tell you much about how they work or teach you anything other than marginally improving your keyboard technique. I have also set out to take on fairly early in this series the most difficult parts of BASIC, or so they seemed to me when I was learning it. So the next part will deal with ARRAYS which always struck terror into me when I was confronted with them, I hope that afterwards this will not be the case with you.

When writing a tutorial series such as this it is difficult to assess if you are actually gaining from it. If you do have any questions on the contents then letters to our delectable Editor would be most welcome. Please restrict them to have points raised within this series only and if there is something that you wish me to go over again, then we may have a "Questions Arising" article in the near future.

128 Memory Map: Zero Page

Searching for a memory location you know exists but can't find can be very frustrating. Over the next issues we will be publishing the 128's memory maps. We start this month with zero page.

This is a preliminary zero page memory map for the Commodore 128 when in 128 mode. Much of the memory map is similar to the C-64's although most of it has moved location a byte or two. For instance the start of BASIC pointer has moved up from 44-45 (2B-2C) to 46-47 and yet the real-time jiffy clock and the start of tape buffer pointer locations remain the same.

Without a map I found it very difficult to make the most of my 128 and I know how very frustrating it can be searching for a memory location you know exists but can't find. I am currently up to my neck in reams of memory maps and kernal routines etc. These I hope to get into shape and then into your homes as soon as possible.

HEX	DECIMAL

POKE 22

This program is about as useful as an umbrella would be to a deep sea diver but will serve to demonstrate a couple of ideas suitable for inclusion in your own programs! Type in and run the listing. You will see "PRESS ANY KEY" within a box of stars on your screen. Pressing a key will then list the program. If you examine the listing you will notice that lines 10-12 are the same as the display. Notice that the lines do not have any other commands on them (eg print etc). How therefore does the text get onto the screen?

Reading through the programme will hopefully explain.

Line:

0: Sends the programme to line 4.

4: Clears the screen and then prints a chr\$(31) which causes all further text to be printed in blue (the same as the background). "GOTO1" is printed next with a chr\$(5) changing the text back to white.

5: Pokes the chr\$ codes for HOME and CARRIAGE RETURN into the keyboard buffer which lives at locations 631-640. Location 198 is poked with a 2. This is to tell the computer how many characters are in the buffer. Note the buffer will be read when the program ends.

6: Poke 22,35 is not the sort of poke you will find in your ever helpful Commodore User manual. This is a curious poke which succeeds in 'turning off' the line numbers when a program is listed.

This it does when the "LIST10-" is carried out. You can see from this how the "PRESS ANY KEY" (Lines 10-12) is displayed. After a list has been performed the program comes to an end regardless of how to where it has been performed. The keyboard buffer now comes into play. The Home code is executed first which places the cursor in the top left hand corner (where we earlier printed "GOTO1")

followed by the CARRIAGE RETURN. What this does in effect is to enter GOTO1 in direct mode. This gets the program going again and takes us onto line 1.

1: This poke restores the line numbers.

2: Tests to see if any key is pressed. Once a key is pressed the program will continue with the next line.

3: The last line (Funny, I thought it was the third!) clears the screen, lists the program and then ends.

Such a tiny program yet so many words! I hope this will give some idea of your more adventurous experiments some new ideas to get to grips with.

```
0 GOTO4

COMMODORE 64 OWNERS The Ultimate Reference Book

Programming The Commodore 64 by Rae West

Comprehensive and readable teaching and reference book on the 64. Takes over where Commodore's manual leaves off. Much larger than most computer books. Programs available separately on disk or as pack of 2 tapes - saves keying time. Topics covered include course in BASIC programming, how BASIC works, extending BASIC, machine-language course, ROM guide and memory-maps etc, thorough coverage of graphics and sound, tape and disk handling hardware.

"Best of all the books... required reading for all those who wish to make full use of their 64s" - Jack Cohen.

Programming The Commodore 64 (R. West) £14.90 in UK/Europe. 624 page paperback. 17 chapters & appendices. ISBN 0 9507650 2 3. Published by Level Ltd. (Computer Publications), P.O. Box 438, Hampstead, London NW3 1BH.

Programming The Commodore 64 Disk £8.90 (incs. VAT) ISBN 0 9507650 3 1. Programming The Commodore 64 Tapes £9.90 (incs. VAT) ISBN 0 9507650 1 X.

Programming The VIC (R. West) £10.90. Large paperback. ISBN 0 950 7650 1 5. "Packed with virtually all the information you are likely to read" - J. Goldsmith.

Programming The PET/CBM (R. West) £18.90. Large paperback. ISBN 0 9507650 0 7. "Undoubtedly the most comprehensive reference I have seen" - Jim Butterfield.

TOOLKIT IV

1541 DISK UTILITY

COMPLETELY NEW - INCLUDES ALL THIS...

DOCTOR V2 - allows you to read and write any track or sector, including extra and renumbered tracks, extra and renumbered sectors, and looks underneath READ ERRORS. Repairs damaged sectors.

FORMATTER - format an entire disk, or format any individual track or half-track from track 0 to 41. Redefine any of 30 parameters including tracks per zone, sectors per track, bit density, data block size, data block fill bytes, header and data block id's, header and tail gaps, off-bytes, syncs etc. This allows you to create or recreate a completely unique disk format; and it formats an entire disk in less than 10 seconds.

HEADER/GAP EDITOR - decodes and displays all header information including off-bytes, checksum and header gap. Rewrite the entire header and header gap. Renumber sectors. Also edit any sector tail-gap. Recover corrupted headers.

ERROR LOOK - the fastest, most thorough error detector ever gives you all necessary parameters for backing up, detects all errors, extra and renumbered sectors, extra and renumbered tracks, half-tracks, from track 0 to 41.

ERROR MAKE - make 20, 21, 22, 23, 27 and 29 read errors on any individual track or sector and redefine any necessary parameters, and even recreate data under the original error. Also includes a method of preventing your disks from being copied by most disk copiers.

FAST DISK COPY - copy a full disk with one drive in less than two minutes. Copy a partially filled disk in even less time.

FAST FILE COPY - transfers files over five times faster than normal, loading and saving.

COMPACTOR - will compact any machine code program. Can compact files by 50%: saves disk space and loading time.

DISK LOOK - the ultimate directory and file manipulation utility. Sort the directory in any way you like. Edit DOS version. Display file start and end addresses. Disassemble any file with standard and unimplemented op-codes. Edit BAM. Unscratch files. Plus more...

DRIVE SPEED TEST, DISK ERASE, DISK MON, DISK LOG, BASIC COMPACTOR/UNCOMPACTOR, & FILEMAKER, make your 1541 play the national anthem, or increase drive head speed and still more that we can't squeeze into this ad (and even a few little surprises we aren't telling anyone about).

TOOLKIT IV is undoubtedly the most comprehensive disk utility available for the 1541 drive, yet it couldn't be more user friendly. Supplied on disk with comprehensive instruction manual. You will wonder why you bought those heavily advertised, more expensive utilities.

• COMMODORE 64 • TRANSFER ALL MAJOR TURBOS • AUTOMATIC • NO USER KNOWLEDGE • NO HARDWARE • TURBO IDENTIFIER • AUTO LOAD OPTIONS

LOOK AT DOSOFT'S NEW OFFERINGS AND SEE WHAT'S IN THEM FOR YOU

MegaTransfer Disk

Our complete collection of tape to disk transfer utilities covers all the major turbo loading systems, including the latest combination picture/strip loader, and individual routines for unusual loaders.

- Now incorporates DISKUS 1 (previous price £11) for your standard load tape collection
- All transfer is automatic
- No special hardware or user knowledge required
- Efficient use of disk space
- Transferred programs reload independently
- MegaTransfer Disk will transfer programs which NO other utility will handle
- An essential purchase. Don't confuse MegaTransfer with similar utilities which have severely limited capabilities.

£17

MegaUtility Disk

A handy collection of utilities to make the best of your 1541 and 64. Very fast. Very convenient.

- **AlphaLoad** Disk Turbo Loader. Load your programmes at over FOUR times the normal rate. Example: 200 blocks. Normal speed 130 seconds. With AlphaLoad just 30 seconds.
- **Fast Copy** Backup a whole disk in just 3 minutes. Not for heavily protected commercial disks.
- **Turbo File Copy** copy selected programs from your disks at TURBO speed.
- **Fast Format** Format your new disks at TURBO speed.
- **Pro Sprite** A high class sprite library/editor. 100% machine code.
- Joystick control.

£12.50

Numeric to String converter

This program will take any numeric expression and convert it into a specified string length. Trailing zeros in the decimal part of the number are displayed, and there is a rounding option. Negative numbers can be formatted in three ways: a leading minus sign, a trailing minus sign, or a trailing CR. The two latter options have obvious implications of great importance for commercial programs. The formatting ensures that in a column of numbers the decimal points are in vertical alignment. The string length LEN is constant regardless of the visual length of the string.

Because of the formatted nature of the string, this program can be used in conjunction with the sort program published in Volume 3 Number 6. In this case negative numbers must have a leading minus sign, but will sort in reverse order i.e. -1, -2, -3,...-n. However users can overcome this apparent problem by adding any number to all the numbers in

Convert any numeric expression into a specified string length with this program from Peter Dennison.

the array to ensure that all negative numbers are converted to positive. My program can then be used with the sort program, followed by a subtraction of the previously added number. The result will be that all numbers are correctly sorted i.e. -n...-3, -2, -1, 0, 1, 2,...n

The syntax is SYS49656, Expression, N1, N2, N3, String variable.

The expression can be any numeric variable which would normally follow LET. If the result of the expression is in exponential format then OUT OF NUMERIC RANGE ERROR is generated.

N1 and N2 format the string, and represent the number of characters to the left and to the right of the decimal point. Any attempt to use variables will generate SYNTAX ERROR. The sum of N1 and N2 must be in the range 1-8, but if N2=0 then N1 can be 9. If the sum of N1+N2 is greater than 8 (or 9) then STRING TOO LONG ERROR is generated.

If the image is too small for the result of the expression then OVERFLOW ERROR is generated.

N3 deals with the rounding and negative number options:

N3=0 rounded with leading minus sign
N3=1 truncated with leading minus sign
N3=2 rounded with trailing minus sign
N3=3 truncated with trailing minus sign
N3=4 rounded with trailing CR
N3=5 truncated with trailing CR
N3>=6 generates ILLEGAL QUNATITY ERROR

The string variable is where the string is deposited.

ATTENTION ALL PROGRAMMERS!!

You may be an experienced programmer – you may be a beginner. Either way, you may have come across some useful tips which could make life easier for other CCI readers.

Or maybe you have written a program, either in Basic or assembly language, that you feel is worthy of publication.

CCI always welcomes contributions from readers. We will publish any suitable listings or programming advice...and we'll pay you for it!

If you wish to contribute something for publication, we require programs on cassette or disk, together with any additional explanatory information and a CLEAR printout of any listings. (The better the original printout, the better the reproduction in the magazine.)

Please enclose a SAE if you wish to have your program returned to you. Please package disks or cassettes carefully!

The address to send contributions to is:

The Editor,
Commodore Computing International,
Finsbury Business Centre,
40 Bowling Green Lane,
London EC1R ONE

Don't forget...CCI welcomes programs for all Commodore computers – 64, Plus/4, C16, 128 plus the VIC and PET.

COMMODORE

Don't miss out!

With the growing popularity of Commodore Computing International Magazine, newsagents and bookstalls sell out quickly. More and more frustrated readers wanting the one magazine every Commodore owner needs are finding they are missing out and some months having to do without the latest news, reviews and vital feature articles and programs.

The popular solution is to place an order for your Commodore Computing International Magazine with your newsagent or by direct subscription to us.

A subscription means you get the magazine delivered to your door. It saves you time and makes sure you don't lose out on what's happening in the Commodore world.

Send in the subscription coupon below and get the best Commodore magazine the easy way — through your letterbox. Don't miss out on the best, mail the coupon **now**.

(If you don't want to cut up the magazine, we're happy to have a photocopy of the coupon or a request on plain paper.)

Commodore — Subscription Order Form

To Subscriptions Manager, Commodore Computing International,
40 Bowling Green Lane, London EC1R 0NE. Tel: 01-278 0333 Telex: 267247 FINSEC

Please send me 12 issues of *Commodore Computing International*

Tape It on Pet

The program TAPEIT is designed for use on a Commodore PET or C64. TAPEIT was produced when several copies of a suite of programs on tape was required, and it seemed that it was a waste of time to wait around during this process, after all repetitive operations are what computers are best at. There are several ways of transferring programs from disk to tape, but most make use of direct access commands to the disk and a fair amount of machine code is usually needed.

TAPEIT produces the same effect by making use of Commodore's screen editor. This is done by printing the commands to the screen and then forcing the computer to believe that they have been typed in by hand. This is done by POKEing a sequence of carriage return characters into the keyboard buffer. If there was text under the cursor when the return was performed, and if that text was a command, then that command would be executed. It is this method that TAPEIT uses, so all the program has to do is a little printing to the screen in the correct places.

Program description

Lines 70 – 120 Tests for PET or C64

The C64 has RAM at location 49152 so it can be changed with a poke. Just in case

Transfer programs from disk to tape easily with this program from A Eskelson written for the PET. The author suggests that the program will also work on the 64

this is being used for program use the original value is restored after the test. The PET has ROM or nothing at this location so POKEing has no effect.

Lines 130 – 180 Setup values for the PET

Lines 190 – 230 Setup values for the C64

The differences in the system locations of the C64 and the PET require different parameters, so the values for the working memory and the keyboard buffer and keyboard queue need to be changed. The variable DD holds the location of a spare byte of memory, KQ holds the location of the keyboard queue, and KB the location of the keyboard buffer.

Lines 250 – 320 read the names of the programs into the data array, this has to be reset every time the program is loaded, so to keep the point in the array that the program has reached the location DD is

used as this is not reset when the program is reloaded.

Lines 330 – 390 use the location DD to point to the position in the array of the next program to transfer.

Lines 400 – 490 update the location DD and print the commands onto the screen.

Lines 500 – 580 set up seven carriage returns in the keyboard buffer.

Program Use

The program is prepared for use by editing or adding, as required the lines from 590 onwards. Simply insert the names of the programs that you wish to transfer as data. eg

590 DATA "PROG1"

600 DATA "PROG2"

nnnn "END"

The last entry in the list must be the word "END", remember the names and the word END must be inside quotes.

Reserve the program using the same name as in line 460 (TAPEIT) if you wish to change the name you must also change line 460. Ensure that the programs that you wish to transfer are on the disk, load TAPEIT and RUN. The first time that the program is run, you will get the normal PRESS PLAY AND RECORD message, but from then on the process is automatic, assuming that your tape does not run out!.

Don't forget...CCI welcomes programs for all Commodore computers – 64, Plus/4, C16, 128 plus the VIC and PET.

1541 device number changes

With the recent price reductions on the 1541 disk drive, there has been a considerable increase in the number of people who own a disk drive. This price reduction has also caused many disk drive owners to consider a second drive to reduce the number of times a disk has to be changed over and to increase the amount of on line data available. The disk drive is designed to allow up to four drives to be attached at once. In order to do this, the drive numbers must be changed.

There are two methods to change the device number. First is the software method which is ideal if an additional drive is to be used for only a short time – for example if you have borrowed one from a friend. This method is quite well covered by the 1541 Users Manual.

The second method is the hardware method which changes the device number more permanently thus allowing the second drive to be used as soon as switched on. The description in the Users Manual is not very clear however and, on checking my disk drive, not very accurate either.

It is hoped that this article will help to make it clearer.

1. Remove all leads from the disk drive. It is especially important to ensure that the mains lead is removed.

2. Turn the drive upside down. This will reveal four x-point screws recessed about 3cm below the base, one in each corner.

3. With a x-point screwdriver remove the four screws and place them somewhere safe.

4. Hold the top and bottom of the drive firmly together and turn it the right way up.

5. Carefully remove the top cover by simply holding the sides and lifting, place

the top cover safely out of the way.

6. Compare the drive with the diagram making sure that the front of the drive is in the same position as the front of the drive in the diagram.

7. On the circuit board 16cm from the front and 8cm from the left hand side (looking from the front) you will observe two small circles, one behind the other, made up of what look like back to back 'D's. These are what governs the disk drive device number. The small inter-connecting link between the 'D's must be broken to change the device number.

If you wish to change to device number 9, then just break the link on the front circle using a knife or other suitable implement and rebuild the drive in reverse order. For device number 10, break only the rear link and for device number 11, break both links.

8. Having reassembled the disk drive, carry out a test with just one disk drive connected to ensure the modification was successful. If the device number has not changed it will most likely be due to an incomplete breaking of the link.

This method of conversion works because when the drive is turned on, one of its start up tasks is to check these links to get the device number which it then stores in RAM. When the command is sent down

the serial bus telling a device to prepare to receive a message or to prepare to send a message the disk drive checks against this number to see if the command was meant for it. If it is it can then reply.

For those interested in the more technical side the following is what happens in detail.

The two links discussed above are connected to Veratile Interface Adapter number 1 port B bits 5 and 6 at address \$1800 (6144 decimal). These bits are normally set to 1's but if the links are still connected they pull the bits down to 0's. When the disk drive is turned on the start up routine reads port B and isolates bits 5 and 6. These are then sifted to positions 0 and 1 thus creating the number to add to 8 to find the device number. As well as adding 8 a further \$40 (64 decimal) is added to produce the code for TALK and stored in location \$78 (120 decimal) for later use. The code for LISTEN is produced by adding \$20 (32 decimal) and stored in location \$77 (119 decimal).

These numbers are produced automatically by the Kernal routines when using the computer, both from basic or machine code using the standard Kernal routine calls, but should be looked out for if accessing the Kernal more directly.

Michael Tinker

If you've got one...

The Official
Book for the
COMMODORE 128
Personal Computer.

If you've bought the new Commodore 128 or you're thinking about it, Pitman have news for you.

A new book from SAMS, the official Commodore publishers. *It's the first and only official guide to Commodore's exciting new business computer.*

you'll need the other!

Now you can read about the 128, with its three operating modes – 64, 128 and CP/M – and learn how it can work for you at the office or at home. So whether you own a 128 or simply want to know more about it, you'll find that the official book for the Commodore 128 Personal Computer is a very wise investment.

- ★ Use spreadsheets, word processors and databases
- ★ Choose peripherals
- ★ Create graphics and animation
- ★ Run CP/M programs ... and more!

Choosing the right computer is a good start — but can you find the right software?

At SUPERSOFT we're very conscious of the fact that people who spend several hundred pounds on computer equipment are looking to do rather more than play Space Invaders.

Financial planning is a rather grand name for something you've been doing all your life — making ends meet! Perhaps if Mr Micawber had used **BUSICALC** he would have been able to balance the books a little better.

For home, club or small business use **BUSICALC 1** should pay for itself in no time at all; for larger companies we recommend **BUSICALC 3**, one of the few really valuable programs that you can learn to use in a day.

Although your Commodore 64 is a powerful musical instrument you need to be a pretty good programmer to understand how it all works. Unless, of course, you buy **MUSIC MASTER!**

To use **MUSIC MASTER** requires no prior musical knowledge, though in the hands of an experienced musician it will prove an invaluable tool. You don't need to know the first thing about programming either! **MUSIC MASTER** is the musical equivalent of a word processor, remembering the notes you play and allowing you to replay and edit them as you wish.

INTERDICTOR PILOT is a space flight simulator. Nowadays simulators are widely used to train pilots and astronauts because — to be frank — it's a lot cheaper (and safer) than the real thing!

Imagine, if you will, life in the 22nd century: space travel is commonplace, and on the outskirts of the galaxy the first war between civilizations is being fought. A shortage of trained pilots has prompted the Federation to develop a computer simulation that allows raw recruits to gain experience without paying for their mistakes with their lives. With the aid of your Commodore 64 you too can learn to pilot the Interdictor Mk 3 craft. But be warned — this is no game!

SUPERSOFT, Winchester House, Canning Road,
Wealdstone, Harrow, Middlesex HA3 7SJ
Telephone: 01-861 1166

Other SUPERSOFT products include the **MIKRO ASSEMBLER** cartridge, the only assembler that's ideal for beginners yet powerful enough for the professional (most of our competitors use it!). The **VICTREE** cartridge adds dozens of commands to Basic including toolkit aids and disk commands; or on disk there's **MASTER 64**, a really comprehensive package for the keen programmer.

Of course, we do also publish games programs, and with classics like **STIX**, **QUINX** and **KAMI-KAZE** in our range we are one of the market leaders. But we most enjoy coming up with the sort of programs that are going to be in use for months and years, not hours and days — the sort of programs that make you glad that you bought a computer — and glad that you bought SUPERSOFT!

You won't find SUPERSOFT products on the shelves of your local supermarket. But most specialist shops stock titles from our extensive range (and are prepared to obtain other programs to order). However you can also buy direct by sending a cheque (pre-paid orders are post free!), by calling at our offices, or over the telephone using your ACCESS card.
